

# IN-SCHOOL ENABLING PROGRAMS : NAEEA SIG

In-School Enabling Programs provide a pathway to university and help prepare Year 11 and Year 12 students for their future university studies.

We are fortunate to partner with high school teachers and students.

## NAEEA

Please email [johanna.nieuwoudt@scu.edu.au](mailto:johanna.nieuwoudt@scu.edu.au) or [s.tenakov@ecu.edu.au](mailto:s.tenakov@ecu.edu.au) if you would like to join a community of practitioners in this growing enabling education space.

## WHO WE ARE

While this SIG is relatively new, it is amazing to have 13 universities represented from across Australia in the group.

Some members have been coordinating, delivering, facilitating these In-School Enabling Programs for over 10 years, and other members are just starting to navigate this space between senior school and first-year university.

## MEETINGS

We meet online four times a year, with a different university presenting on their program. This is followed by discussion on a focus topic towards potential research outputs.

## CONTEXT

The complexity of stakeholders has been a common discussion point, as well as the recent recommendations from the University Accord and our place in driving those aspirations.

## SIG MEMBERS

All members of the SIG generously share their insights to build a conversation about position and purpose of In-School Enabling Programs in the broad discussion of equity education.

While In-School Enabling Programs are not new, they are becoming increasingly prevalent and important for widening participation and preparing students for their university studies while still in school.

## PROGRAMS @

Edith Cowan University

Southern Cross University

Charles Darwin University

University of Newcastle

University of Sunshine Coast

Notre Dame University

Central Queensland University

Curtin University

Murdoch University

University of Southern Queensland

Griffith University

University New South Wales

University of New England

## STUDENTS

"The support provided in [program] was realistic to the expectations of University and honestly made going through a degree easier after getting used to the pressure. The skills you learn in [program] will never leave you if you practice them correctly."

"I caught up with some of my students after their first semester at uni. They agreed that the following aspects of [program] helped them significantly: Research skills and how to use the library, referencing skills, note taking and making, the literature matrix, how to read scholarly articles, academic writing."
