

Presentation types

Oral Research Papers (20 minutes)

These individual paper presentations are brief, impactful sessions which provide an opportunity for presenters to share cutting edge research or present case studies of neuropsychology in practice. These sessions are designed to promote new developments across a range of topics, covering both the theory and practice of neuropsychology.

Also known as Platform papers

Symposium (60 minutes)

Symposium allow a group of people to present papers on a theme, and are especially suitable for state-of-the-art, cutting edge developments that inform neuropsychologists.

A symposium contains 3 or 4 individual papers, linked thematically around a topic of research. Proposals for a symposium must include an overarching submission of all individual abstracts.

'How to' session (60 minutes)

'How to' sessions are 'mini workshops' that offer fast-tracked learning and are intended to offer specific practical advice and guidance on particular aspects of practice of relevance to delegates. 'How to' sessions demonstrate skills or techniques, permit audience participation, and are ideal for practitioners to share an aspect of their professional expertise/learning.

'How to' sessions provide a forum for presenting work of an applied nature on any topic relevant to neuropsychology.

Workshop (3.5 hours)

Workshops provide participants with new knowledge and skills through involvement in interactive learning activities.

Workshops are three and a half hours in duration, including a 30 minute break

Professional Forum (60 minutes)

A forum allows extended discussion of contemporary issues relevant to neuropsychologists. Typically, it involves a panel of speakers who present for a short period, followed by discussion and debate.
