

15th Australasian Viral Hepatitis Conference Late Breaker Abstract Guidelines

For your presentation to be considered, abstract guidelines must be followed as closely as possible. Please ensure that the presenting author completes the abstract submission prior to the deadline

Theme/Discipline	Explanation
Clinical Sciences <ul style="list-style-type: none">• Clinical science• Biomedical science (e.g. laboratory-based)	Abstracts will present research that seeks to improve the prevention, diagnosis, and treatment of viral hepatitis
Epidemiology and Public Health <ul style="list-style-type: none">• Health Economics• Health services and systems• Mathematical modelling	Abstracts will present research on the social, cultural, environmental, occupational, and economic factors that affect those living with viral hepatitis
Social Science & Policy Research	Abstracts may include empirical or non-empirical (conceptual/theoretical) studies which focus on social, structural, cultural, material and policy contexts. They may include evaluations of policies, analysis of policy making processes, analysis of stakeholders to policy, and analysis of policy statements. They may include studies of lived experience, from patient and provider perspectives.

Topics

The conference encourages submissions on the following topics:

- Aboriginal and Torres Strait Islander Health
- Aboriginal and Torres Strait Islander Health Workers
- Aboriginal and Torres Strait Islander Practitioners
- Cascades of care/linkage to care
- Community engagement
- Diagnostics
- Drug treatment
- Drug Use
- Education and health promotion
- Harm reduction
- Integrated models of care
- Law and human rights
- Mobile outreach
- Nursing and Midwifery
- Other First Nations/Indigenous Health
- Policy
- Pregnancy/Mother to child transmission
- Prevention
- Primary care
- Prisons
- Stigma and discrimination
- Tertiary care
- Testing
- Viral hepatitis mono-infection
- Viral hepatitis and HIV coinfection
- Other

vh2025

Types of Presentations

Authors should state a preference for one of the following and address the abstract to one of the conference themes above.

Presentation Type	Time Allocation	Explanation
Research-Based Oral Presentations	Standard Oral - 12 minutes presentation and 3 minutes question time OR Rapid Fire - 4 minutes presentation and 1 minute question time	Oral presentations on original research findings, case studies, completed projects and theoretical analyses. Presentations should be well structured, rigorous and demonstrate a novel contribution to knowledge.
Posters	Permanently displayed during the Conference High ranking posters – Poster Tour	Posters can present research in progress, case studies, quality improvement activities, divisional projects, or clinical topics. A poster viewing session will take place for delegates to discuss the posters with their authors. Highly rated posters will be awarded a presentation in a poster tour.

vh2025

Abstract Preparation Guidelines for All Presentations

Abstract templates are provided below and **MUST** be referred to prior to writing your abstract. Submitters must ensure they use the correct template for their abstract type and follow all instructions provided.

[Research Based Abstract Template](#)

Note: If abstract guidelines are not conformed to and the templates provided are not used, the abstract will be rejected and not submitted for review.

Acknowledgement of affected communities in Viral Hepatitis

Requirement 1: If your research is about viral hepatitis and involves gathering data, lived experiences, biological samples or other aspects from the bodies or lives of people living with viral hepatitis and our participation as people living with viral hepatitis has influenced your work, we encourage you to consider and build upon the sample text provided as an acknowledgement of the role that people living with viral hepatitis have played in the response to viral hepatitis at the beginning of any presentation of your work. Examples below:

Example 1: "I want to begin my presentation by thanking the people living with Viral Hepatitis who have participated in this research. Our fight against Viral Hepatitis Elimination is indebted to people living with Viral Hepatitis both past and present."

Example 2. "I want to begin by acknowledging and thanking the people living with Viral Hepatitis who have generously participated in this research."

Requirement 2: When developing your presentation, we also request that presenters outline how your work has had/ can have a positive impact on the community including key population groups (e.g. Aboriginal & Torres Strait Islander peoples, People who Inject Drugs, CALD) and what steps are being taken to take the research into practice.

Online Abstract Submission

Abstracts must be submitted electronically through the online submission site. You can access the site via the conference website. You will be required to enter:

- Preferred theme/discipline
- Topics
- Preferred presentation type
- Authors' names including the abstract submitter as the presenting author and contact details - address, telephone and email. Note: Abstract presenters will be required to fund their own attendance at the conference and should not submit an abstract if this is not possible. Scholarships are available and preference will be given to those who do submit abstracts, however authors should ensure they are able to fund their own travel if need be.
- Authors' affiliations
- Abstract title
- Abstract as a word document (maximum 300 words) plus a disclosure of interest statement
- Abstract must also be copied into the fields provided
- Short biography of presenter (maximum 50 words). This information will be used by the session chair for introduction purposes and may be published in conference literature

Please contact the Conference Secretariat by emailing conference@ashm.org.au or calling +61 458 291 166 if you are unable to lodge your abstract via the website or if you have any queries. We recommend using Firefox, or Google Chrome as your browser to access the online submission site.

By submitting an abstract all authors agree to release the license to the Conference organisers and give permission to publish the abstract in the conference handbook, website, application, USB etc. and in so doing certify that the abstract is original work. If your abstract is successful, it will be published on the conference website on the date of notification of success.

Conference Registration

Abstract presenters will be required to fund their own attendance at the conference and should not submit an abstract if this is not possible. All presenters (including poster presenters) will be required to register for the conference by **Sunday 25 May 2025**. It will be assumed that any presenter not registered by this date has withdrawn from the program and their abstract will be removed from the handbook.

Selection Criteria

All abstracts will be reviewed by three independent peer reviewers. Abstracts will be provided a score out of 20 points based on the following criteria:

Research-based abstracts

Background and clarity of objectives of the study (0-5)

Is the background of the study and objectives clear and well-presented?

- Excellent (score 5) - The background/rationale is exceptionally clear, the research is novel and fills a significant gap in the literature, and there is a very clearly stated objective
- Very good (score 4) – The background/rationale is very clear, the research is novel and fills a significant gap in the literature, and there is a very clearly stated objective
- Good (score 3) – The background/rationale is clear, the research is interesting, and fills a gap in the literature, and there is a clearly stated objective
- Average (score 2) – The background/rationale is stated, the research confirms previous findings, and the objective is stated
- Below average (score 1) – The background/rationale is not well stated, the research is not very novel, and the objective is not well stated
- Very poor (score 0) – The abstract has no background/rationale, the research is not relevant, and the abstract is missing a clearly defined objective

Appropriateness of the study design and methodology (0-5)

Is the methodology and study design appropriate for the hypothesis or aims/objectives of the study?

- Excellent (score 5) - The methods are exceptionally clear, the study design and methodology are entirely appropriate to evaluate the stated objectives, and the statistical analyses are entirely appropriate.
- Very good (score 4) – The methods are very clear, the study design and methodology are very appropriate to evaluate the stated objectives, and the statistical analyses are very appropriate.
- Good (score 3) – The methods are clear, the study design and methodology are appropriate to evaluate the stated objectives, and the statistical analyses are appropriate.
- Average (score 2) – The methods lack some clarity, there are limitations to the study design and methodology for evaluating the stated objectives, and the statistical analyses have some limitations.
- Below average (score 1) – The methods lack clarity, there are major limitations to the study design and methodology for evaluating the stated objectives, and the statistical analyses have major limitations or are incorrectly applied for the intended aims.
- Very poor (score 0) – The methods are not clear, there are major limitations to the study design and methodology for evaluating the stated objectives which make the study uninterpretable, and the statistical analyses are very poor and/or are incorrectly applied for the intended aims.

Appropriateness of the study results (0-5)

Are the results appropriate for the hypothesis or aims/objectives of the study?

- Excellent (score 5) - The results are very well presented, do an excellent job at supporting the aims/objectives of the study, and provide very novel findings.
- Very good (score 4) – The results are very clearly presented, do a very good job at supporting the aims/objectives of the study, and provide very novel findings.
- Good (score 3) – The results are clearly and adequately presented, do a good job at supporting the aims/objectives of the study, and provide interesting findings.

- Average (score 2) – The results lack some clarity in presentation, or some required results were not reported, do a reasonable job at supporting the aims/objectives of the study, and provide some interesting findings with some limitations in how they are presented.
- Below average (score 1) – The results lack clarity in presentation, or most required results were not reported, do not support the aims/objectives of the study, and provide a lack of interesting findings with major limitations in how they are presented.
- Very poor (score 0) – The results are not clear, or all required results were not reported, do not support the aims/objectives of the study, and provide a lack of interesting findings with major limitations in how they are presented.

Conclusions (0-5)

Are the conclusions clear, are they supported by the findings and does this work significantly contribute to the literature?

- Excellent (score 5) - The conclusions are exceptionally well presented and are well-supported by the findings. The work is an excellent contribution to evidence-based knowledge in the field.
- Very good (score 4) – The conclusions are very clearly presented and are well-supported by the findings. The work is a very good contribution to evidence-based knowledge in the field.
- Good (score 3) – The conclusions are clearly presented and are supported by the findings. The work is a good contribution to evidence-based knowledge in the field.
- Average (score 2) – The conclusions are adequately presented and are partially supported by the findings. The work contributes somewhat to evidence-based knowledge in the field.
- Below average (score 1) – The conclusions lack clarity in their presentation and do not support the findings. The work does not contribute to evidence-based knowledge in the field.
- Very poor (score 0) – The conclusions are not at all clear in their presentation and do not support the findings. The work does not contribute to evidence-based knowledge in the field.

Note: Research Abstracts may be favoured at review if they incorporate:

- Completed rather than future work
- Original data of high quality.
- An analysis that extends existing knowledge
- Clarity of methodology, analysis and presentation of results
- Specific rather than general findings

- Below average (score 1) – The conclusions lack clarity in their presentation and do not support the findings. Key learnings and next steps for the model are not clear. The work does not contribute to the field
- Very poor (score 0) – The conclusions are not at all clear in their presentation and do not support the findings. There are no stated key learnings or next steps for the model. The work does not contribute to the field.

In balancing the program, the committee may require authors to present their work in an alternate format (e.g. as a poster rather than oral presentation).

Note: We encourage abstracts with an Aboriginal and Torres Strait Islander focus to be presented by an Aboriginal and Torres Strait Islander person or have an Aboriginal and Torres Strait Islander co-presenter be included. If this is not possible, please include some information as to whether any member of the Aboriginal and Torres Strait Islander community in which the research is based was involved in development of the research protocol or in conducting the research. Where possible, this applies to other population groups as well.
