# The Legal Needs Study (LeNS)

## Study aims

- The first study investigating everyday experiences of law among people living with hepatitis B and HIV in Australia.
- Focused on the **nature, prevalence and impact of legal problems** ('justiciable issues') faced by people living with HIV.

**Justiciable issues** (Genn, 1999). A problem or event experienced by a person that has a legal remedy, regardless of whether the person recognises it as legal or takes any action involving the legal system. (Used sometimes interchangeably with 'legal issue' or 'legal problem')

- LeNS measured:
  - What **the most common** and **high-impact justiciable issues** are
  - What **areas of the law** they occur in
  - How they **affect people's health and wellbeing**, including whether they act as obstacles to testing, treatment, monitoring and ongoing engagement in care.
  - How people **address or resolve** these issues (**'Access to Justice'**)
  - What are people's **understanding** of and **attitudes** towards law and justice ('legal capability' and 'legal consciousness')

# LeNS Findings

## Type and prevalence of legal issues

## Legal Problem Prevalence

- 90% reported at least one justiciable issue during the two-year reference period
- This is almost double the rate reported in recent studies of the Australian general population (42%).

## PLHIV experience multiple justiciable issues

- 59% faced five or more distinct legal issues, compared to only 15% of the general population
- 37% reported 10+ legal issues, compared to only 5% of the general population.

# LeNS Findings

## Type and prevalence of legal issues

The legal problems faced by PLHIV are not confined to a narrow area of life or law

		LeNS Survey (PLHIV Australia)	PULS Survey (Victorian General Population)			
Legal Problem Type		Overall	Overall	No long-term illness or disability and low/no mental distress	Long-term illness or disability and low/no mental distress	Long-term illness or disability and severe mental distress
		% reporting at least one justiciable issue	% reporting at least one justiciable issue			
Overall		90.3	42.0	35.8	40.4	73.1
	Professional services and goods	67.4	20.9	17.9	19.9	28.1
	Employment or workplace	51.2	6.9	4.4	3.8	18.1
	Debt and money	52.6	4.2	2	3.3	20.3
	Housing	46.4	10.5	7.9	9.7	25.7
	Government and public services	43.4	3.6	2.1	4.4	14.6
	Injury	36.9	3.9	2.1	4.6	19.3
	Health or mental health	34.0	-	-	-	-
	Government payments	34.0	4.5	2.3	4	19.9
	Family	41.2	5.2	3.3	5.2	24.0
	Discrimination, not related to work	41.7	-	-	-	-

# LeNS Findings

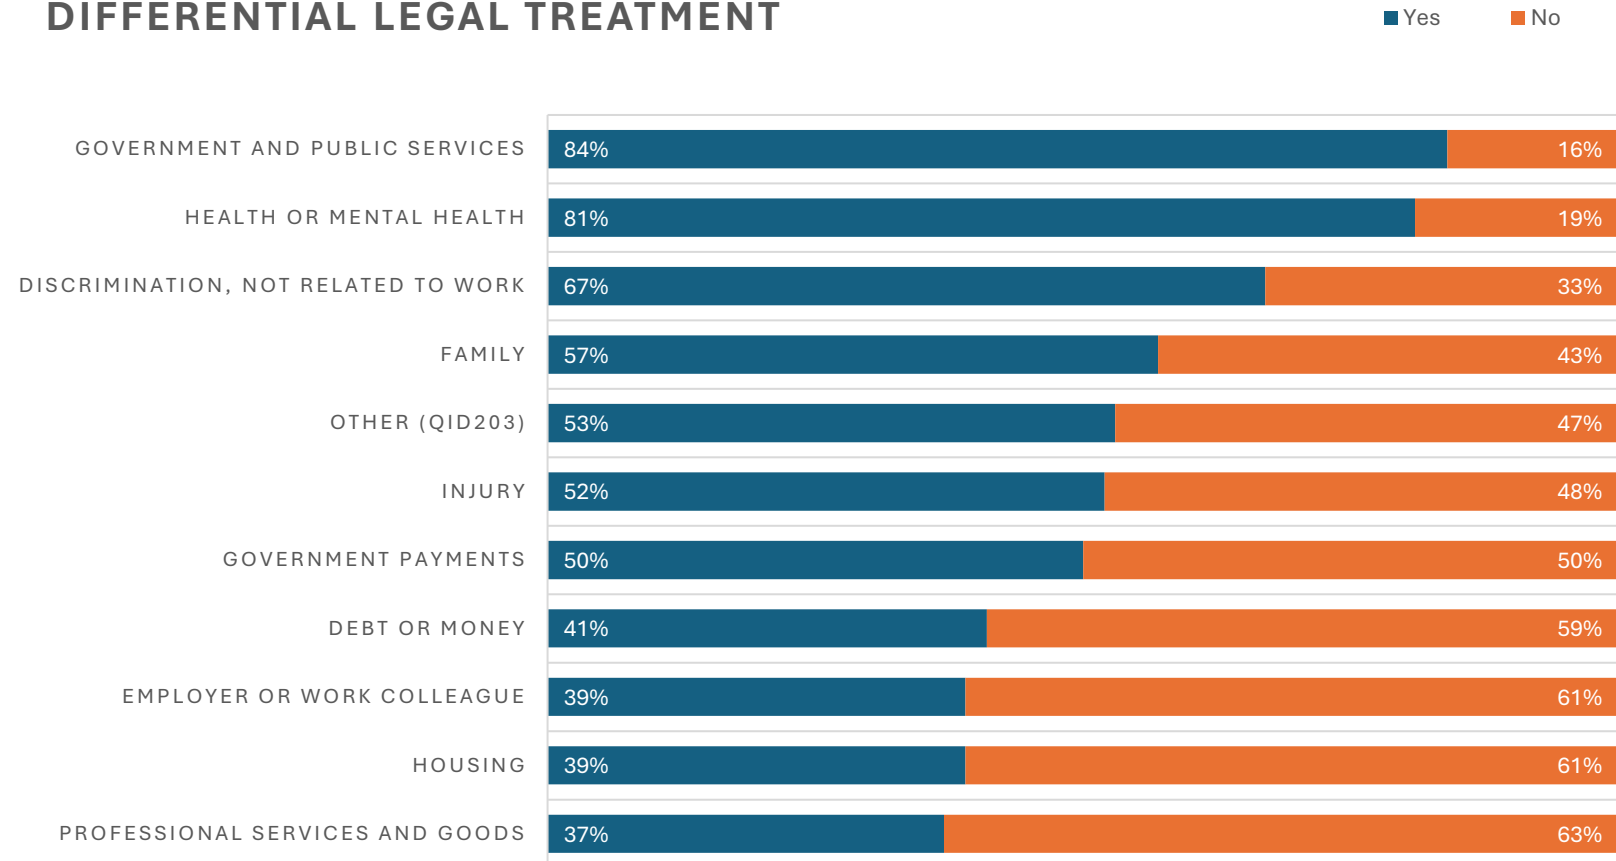

## Impact of living with HIV

## Legal issues are made worse by living with HIV

- 55% of survey participants living with HIV identified their HIV status activated differential legal treatment in relation to their most severe legal problem
- This proportion varied by broad problem type:

### PROBLEM TYPES WHERE HIV STATUS ACTIVATED DIFFERENTIAL LEGAL TREATMENT

# LeNS Findings

## Impact of living with HIV

## Most severe specific justiciable issues where HIV status activated differential legal treatment

Problem Type	Legal Problems Most Frequently Nominated as ‘Most Severe’ (Descending Order of Frequency)	HIV-Related
Government and public services	<b>Citizenship, residency, immigration or refugee status</b> for you, a family member or partner	89.19%
Discrimination, not related to work	<b>Health status-related discrimination</b> including living with a blood-borne virus like viral hepatitis B, hepatitis C or HIV-related discrimination	80.77%
	<b>Being given a public health order by the health department or government, or detained in relation to an infectious or communicable disease or condition.</b>	
Health or mental health	For example, being told you cannot do certain things because of your HIV or hepatitis status or held i	94.12%
Other	Free Text	52.63%
Family	<b>Violence, coercion, harassment or financial abuse in family relationships</b>	69.23%
	<b>Problems or Disputes with Health professionals or service providers.</b>	
Goods or Services	For example, problems or disputes relating to doctors, pharmacists, nurses, health care support workers.	53.33%
Discrimination, not related to work	<b>Sexual orientation-related discrimination</b>	66.67%
Family	<b>Divorce or separation</b>	46.67%
	<b>Problems with mental health treatment, medication or care.</b>	
Health or mental health	For example, treatment that was inadequate, wrong or against your will.	63.64%
	<b>Problems or disputes with housing you rent.</b>	
Housing	For example, problems or disputes regarding rental agreements, a bond, rent payments, rental amount increases, eviction, repairs	33.33%
Injury	<b>An injury or health problem resulting from negligent or wrong medical or dental treatment</b>	71.43%
Injury	<b>An injury at work or health problem resulting from poor working conditions</b>	62.50%
Employer or work colleague	<b>Harassment, bullying, victimisation or mistreatment at work</b>	22.73%
Government payments	<b>Your eligibility for payments or concessions being reviewed</b>	83.33%
Government and public services	<b>Access to, or being excluded from, healthcare services</b>	100.00%

# LeNS Findings

## Health- related effects of legal issues

## Health-related effects of justiciable issues

- **Health services access and quality issues** including:
  - legal problems or disputes with health professionals (24%)
  - exclusion from health services (11%)
- **Treatment quality and safety issues**, including:
  - mental health treatment, medication or care (17%)
  - negligent injury from health care (14%)
- **Health status-based targeting and legal discrimination**, including:
  - workplace (12%) or
  - more generally (24%)
- **Coercive powers**, including problems regarding the use of public health powers (14%).

# LeNS Findings

## Resolution of issues (‘access to justice’)

‘Access to justice’ refers to the ability of people to get a just resolution of their legal problems and enforce their rights. Sometimes this involves legal services, but not always, as just resolution does not always require lawyers, courts or formal legal processes.

A key focus of legal needs research for multiple reasons, including that it shows where more services or supports are needed, and why people can’t or don’t access those. It is enshrined in art 14 of the International Covenant of Civil and Political Rights (ICCPR).

PLHBV report having:

- **low confidence** in their ability to achieve a fair legal outcome for their most severe justiciable issue
- **low levels of legal capability**, including knowing where to get legal help and information
- **not seeking any assistance** for their most severe legal issue, because they felt seeking help would:
  - be too stressful (61%)
  - make no difference (50%)
  - take too long (49%)
  - cost too much (44%), or
  - they had bigger problems (41%)
- **HBV-related stigma was a barrier to seeking legal assistance** (40%)
- **High reliance on non-legal professionals for legal assistance**, including:
  - Professional, health and community services (30%), including HIV Community Organisations (10%) and healthcare workers (8%)
  - friends and family (11%).

# Conclusions

- People living with HIV in Australia experience extremely high levels of justiciable issues across multiple broad problem types, including significantly more justiciable issues than members of the general population not living with HIV
- The Australian legal environment uniquely disadvantages PLHIV by transforming their health status into a significant source of increased exposure to legal problems, with significant consequences for health, wellbeing, rights and community participation
- There remains work to examine and reform laws, policies and legal service delivery across key areas
