

Building data capabilities for HIV, sexual and reproductive health through inclusive design

Kath Albury

This study was funded by an Australian Research Council (ARC) Future Fellowship (FT210100085), and partly funded by the ARC Centre of Excellence for Automated Decision-Making and Society (CE200100005).

About this Project

ARC Future Fellowship: Digital and data literacies for sexual health policy and practice (FT210100085)

Funder: Australian Research Council

Duration: 2022-2026

Project Team

Professor Kath Albury Future Fellow, Associate Investigator, ARC Centre of Excellence for Automated Decision-Making + Society;

Dr Samantha Mannix Postdoctoral Research Fellow, Affiliate Investigator, ARC Centre of Excellence for Automated Decision-Making + Society;

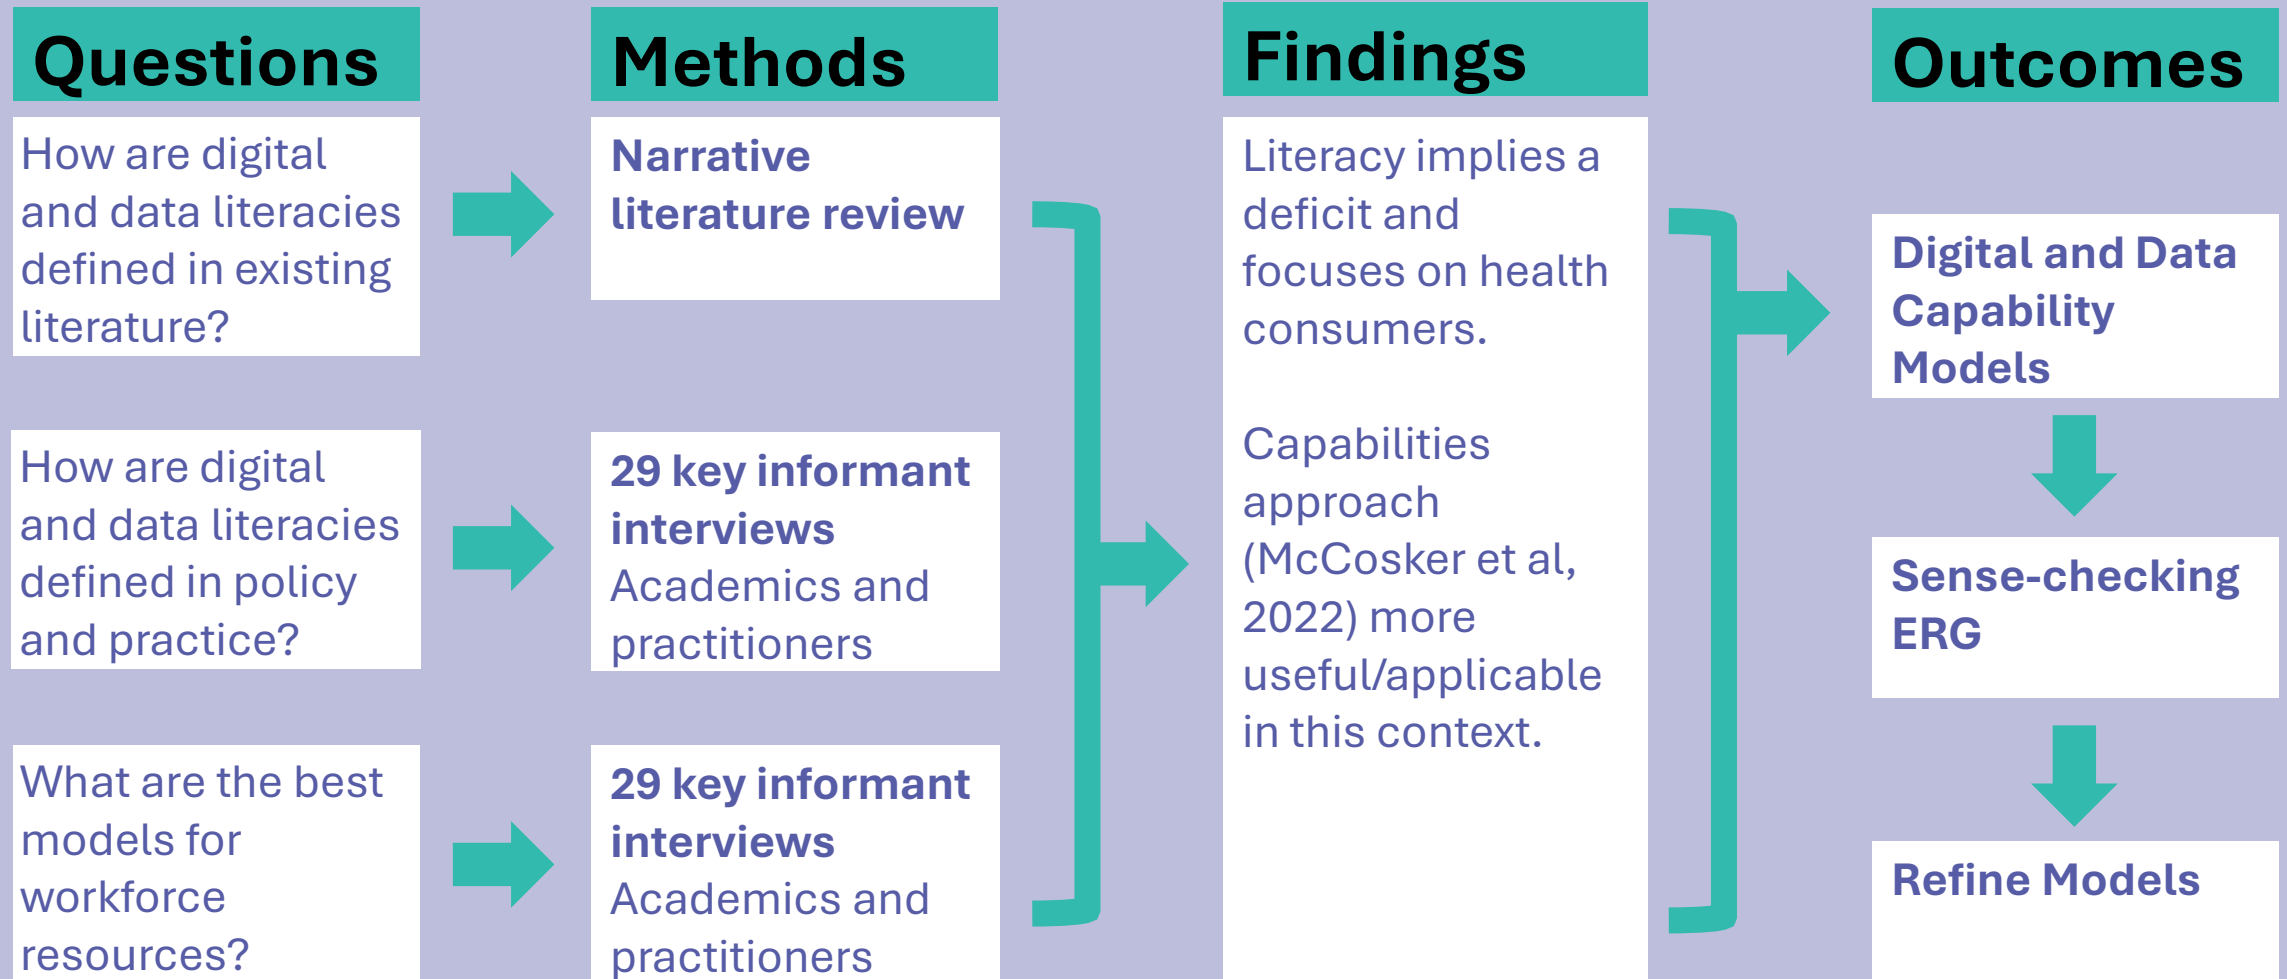

Ms Caitlin Learmonth Higher Degree Researcher, ARC Centre of Excellence for Automated Decision-Making + Society.

Why are data capabilities important for HIV/SRH?

- Data-driven technologies are **central** to healthcare, research and social support systems (ie digital intake forms and surveys, automated decision-making tools, client management software) **and** community experiences of connection, wellbeing & learning (ie dating app profiles/search practices/AI companions/chatbots)
- HIV and SRH data are sensitive and can be stigmatising
- Data are generated, circulated and interpreted by clinical and health promotion practitioners, researchers/epidemiological surveillance systems, policy-makers, commercial actors **and** community/health consumers

What are data capabilities?

‘the technical and material conditions, the skills, knowledge and proficiencies, and the strategic and ethical oversight driving the creation and use of data for improving knowledge, problem solving and decision-making’

McCosker et al, 2022

Access & Infrastructure

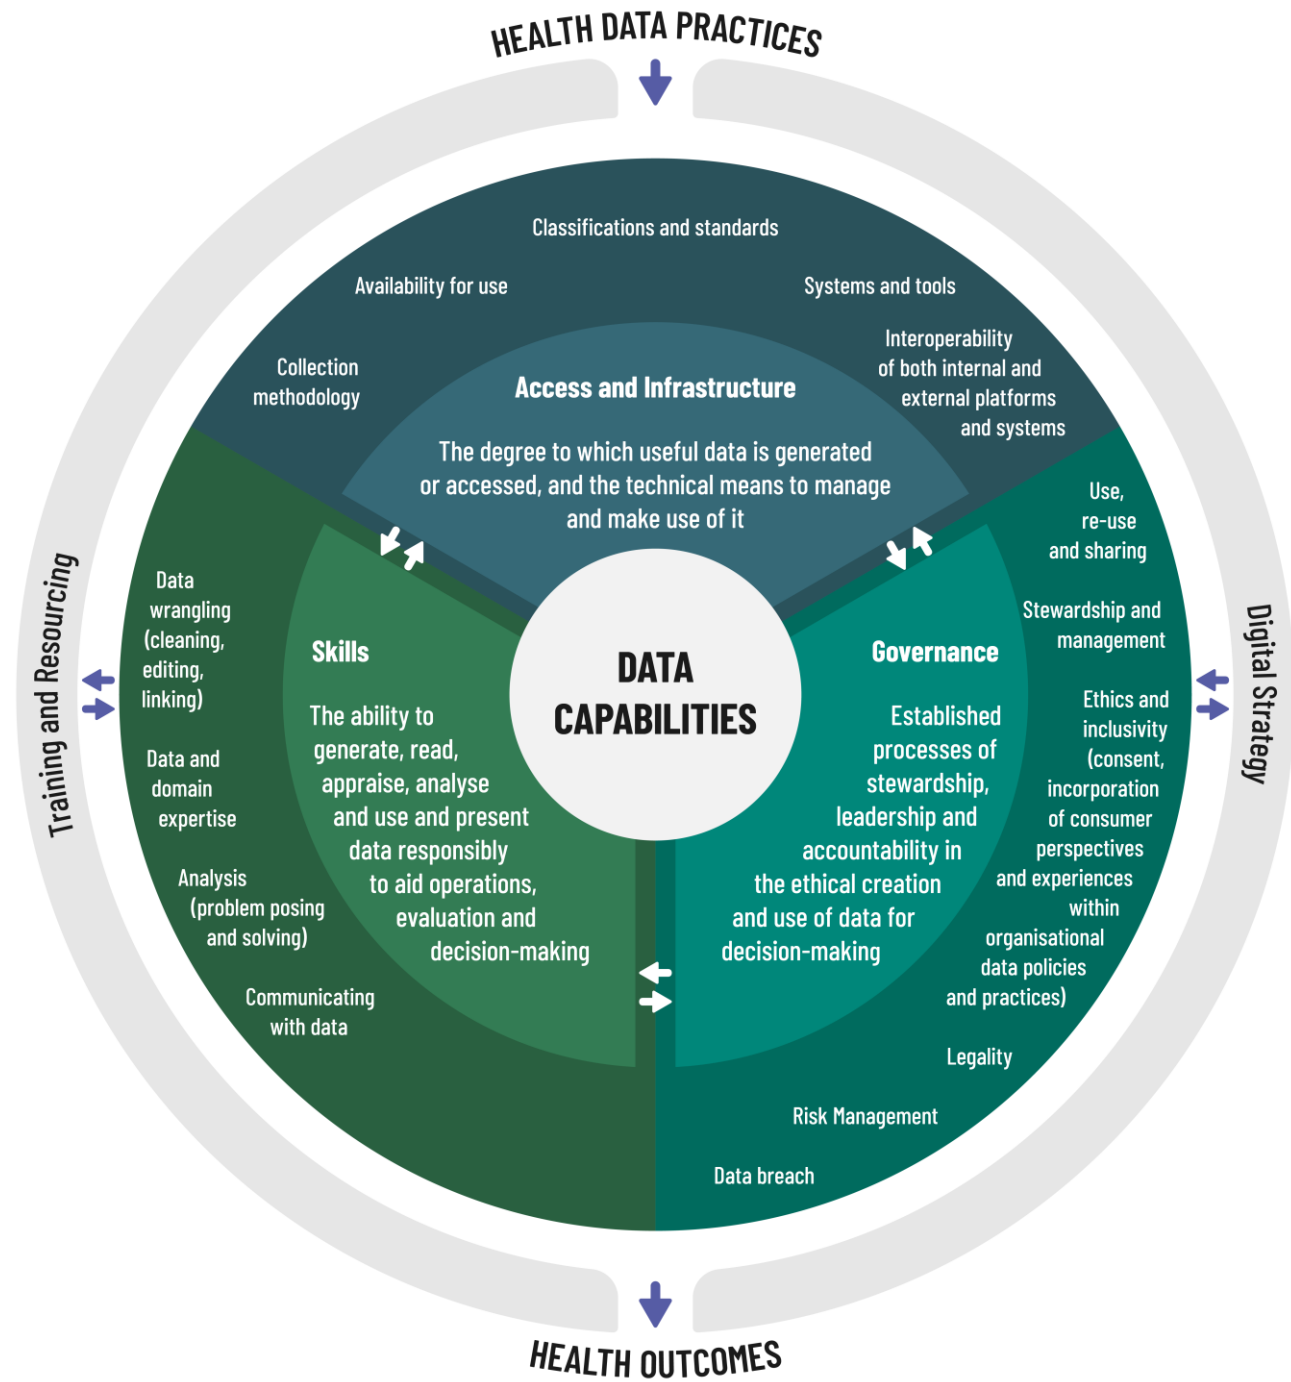

Skills

Governance

Data Capability Model

DATA CAPABILITIES FOR SEXUAL HEALTH POLICY AND PRACTICE

Capability	Definition	Sub-capabilities	Core Questions
Access and Infrastructure	The degree to which useful data is generated or accessed, and the technical means to manage and make use of it	• Collection methodology	• What counts as sexual health data, and how is it generated and accessed?
		• Availability for use	• Are datasets siloed and difficult to access? • Can the organisation access and use the data it generates?
		• Classifications and standards	• Is there an organisation-wide strategy for integrated data software systems?
		• Systems and tools	• How well do different platforms (and their methods of data collection and abstraction) work together?
		• Interoperability of both internal and external platforms and systems	• How well do data technologies support organisational purpose?

DATA CAPABILITIES FOR SEXUAL HEALTH POLICY AND PRACTICE CONT.

Capability	Definition	Sub-capabilities	Core Questions
Skills	The ability to generate, read, appraise, analyse and use and present data responsibly to aid operations, evaluation and decision-making	<ul style="list-style-type: none"> • Data wrangling (cleaning, editing, linking) 	<ul style="list-style-type: none"> • How do organisations and individuals understand and articulate their own data generation practices? • How do organisations and individuals distinguish the difference between organisational data, and externally generated research evidence?
		<ul style="list-style-type: none"> • Data and domain expertise 	<ul style="list-style-type: none"> • How are informal or 'everyday' data practices recognised by individuals and organisations? • How are roles and responsibility for the use of data allocated within the organisation? • How is data expertise fostered and to what extent is this inclusive?
		<ul style="list-style-type: none"> • Analysis (problem posing and solving) 	<ul style="list-style-type: none"> • What is the quality of data and the value of data analysis for decision making?
		<ul style="list-style-type: none"> • Communicating with data 	<ul style="list-style-type: none"> • How is data analysis communicated internally, with funders, clients and the wider community?

DATA CAPABILITIES FOR SEXUAL HEALTH POLICY AND PRACTICE CONT.

Capability	Definition	Sub-capabilities	Core Questions
Governance	Established processes of stewardship, leadership and accountability in the ethical creation and use of data for decision-making	• Use, re-use and sharing	• Who is accountable for datasets, and who has the authority to control access and use them?
		• Stewardship and management	• Who takes responsibility for managing privacy and data security?
		• Ethics and inclusivity (consent, incorporation of consumer perspectives and experiences within organisational data policies and practices)	• What are the guiding ethical principles for ethical decisionmaking around issues such as data sovereignty and stigma? • How are ethical issues identified and addressed?
		• Legality	• How does the organisation make decisions around what data to store and how to store it?
		• Risk Management	• How does lived experience inform decision-making around the collection, use and storage of data? • How are legal requirements and security monitored and implemented?
		• Data breach	• What processes are in place to prevent, monitor and respond to a data breach?
