Acknowledgements

Concerned significant others

01

Substance use can greatly impact CSOs physical and mental health ¹¹

02

Families with someone using substances tend to have higher rates of mental health distress ^{3,4}

03

Providing support to CSOs benefits their wellbeing AND reduce IP use of substances and increase willingness to enter treatment ^{1,5,6}

04

Few substance use services provide support to CSOs ²

05

Rural Australians face additional barriers to accessing substance use support, with most services located in major cities ²

Community Reinforcement and Family Training

CRAFT

CRAFT

01

Grounded in Cognitive Behavioural Therapy and Motivational Interviewing ¹⁰

02

Teaches safe removal of positive reinforcement for problematic substance-using behaviours while increasing positive reinforcement for non-using behaviours ¹⁰

03

Aims: to increase CSO social and emotional wellbeing ¹³ and encourage the IP to enter AOD treatment ¹²

04

Studies show CRAFT improves CSO wellbeing ¹³ and is associated with increased IP engagement with AOD services ¹²

05

However, few studies have evaluated CRAFT when delivered online/telehealth and few studies have evaluated CRAFT in rural communities or within the Australian context

Aim

To evaluate the effectiveness of an online delivery of CRAFT to CSOs with a loved one using substances

Method

- A randomised waitlist control trial with a 1:1 allocation ratio was used to compare online CRAFT against a wait-list control group.
- Participants were randomly allocated to the intervention or waitlist group

Sample Population

Study participants were **self-selected people with a relative or friend who has a substance problem.**

Inclusion:

- Family member/s of someone with substance dependence and a mental illness
- Speaks English
- Over 18 years of age
- Is able and willing to attend FEP sessions
- Is able to provide informed consent
- Having at least one contact/day on four days over the past month (in-person or electronic) with the Identified Person (IP)
- Access to a computer with internet or mobile phone with video conferencing capabilities
- Living in regional Australia (MMM2-MMM7)

Exclusion:

- Domestic and family violence from the person with substance dependence to the family member
- Current participation in other family support/therapy programs

Measures

An outcome evaluation was conducted within and between the groups.

The outcomes for family participants who received CRAFT were compared to those who received reading material while on the waitlist.

The following measures of psychological well-being was used:

Depression, Anxiety, and Stress Scale (DASS-21)

Satisfaction with Life Scale (SWLS)

The Flourishing Scale (FS)

Brief-COPE

Participants accessed six structured CRAFT sessions

All sessions were conducted online via face-to-face video conferencing

CONSORT

Enrolment

Expressions of interest (n=192)

Screening

Screened (n=159)

Allocation

Completed baseline (OM1) (n=126)

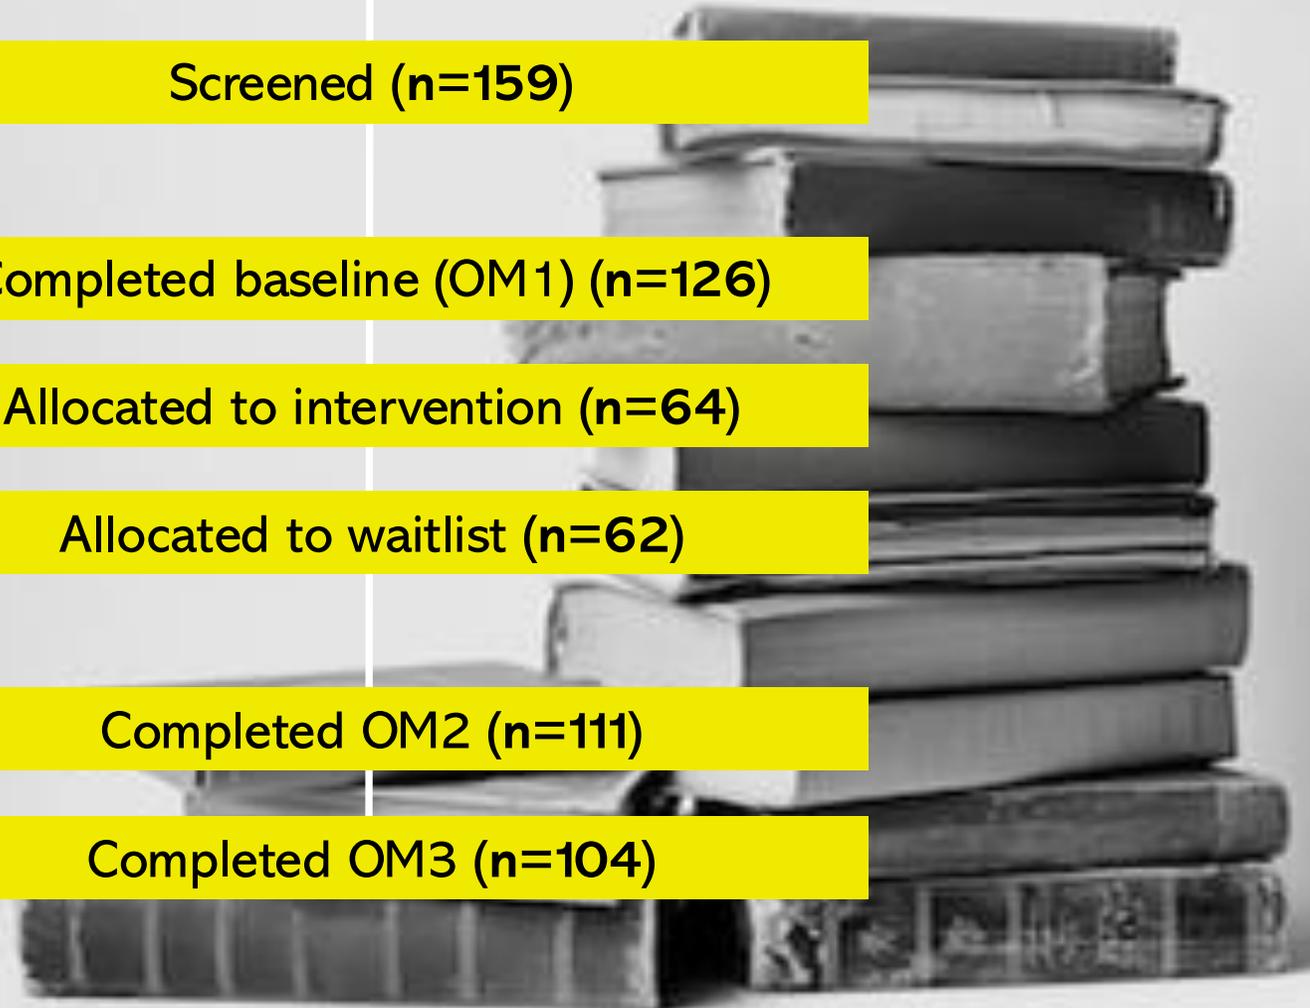

Allocated to intervention (n=64)

Allocated to waitlist (n=62)

Follow-up

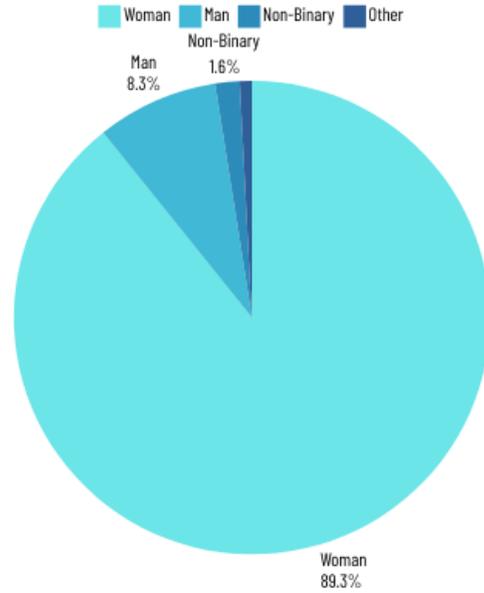

Completed OM2 (n=111)

Completed OM3 (n=104)

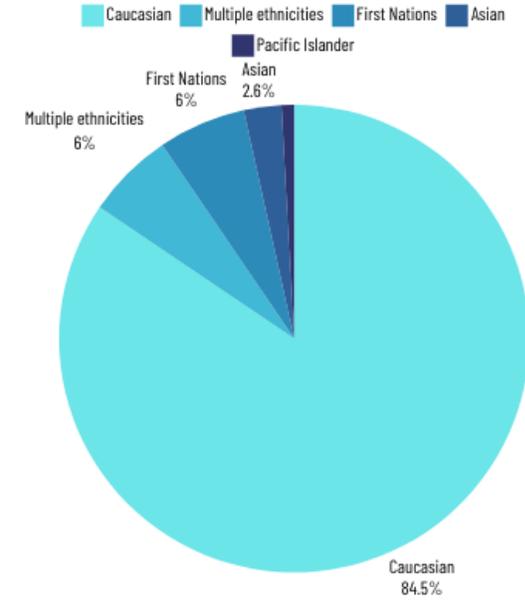

Demographics

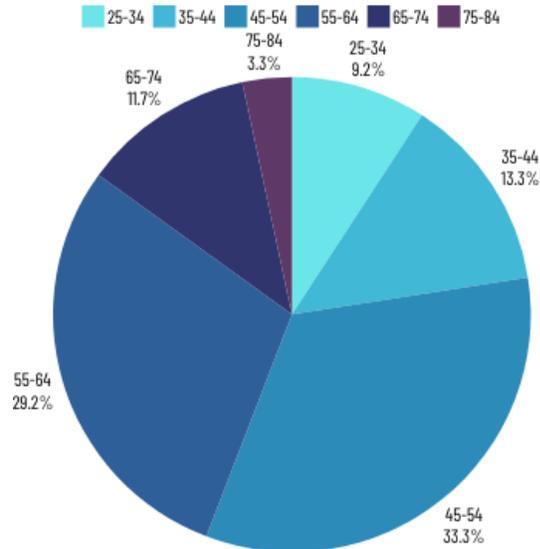

Participant Gender

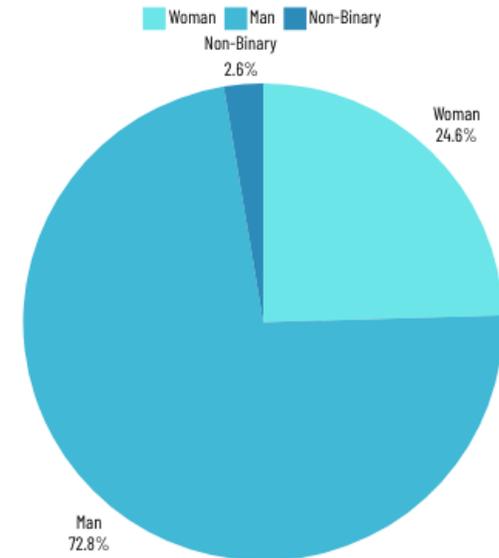

Participant Ethnicity

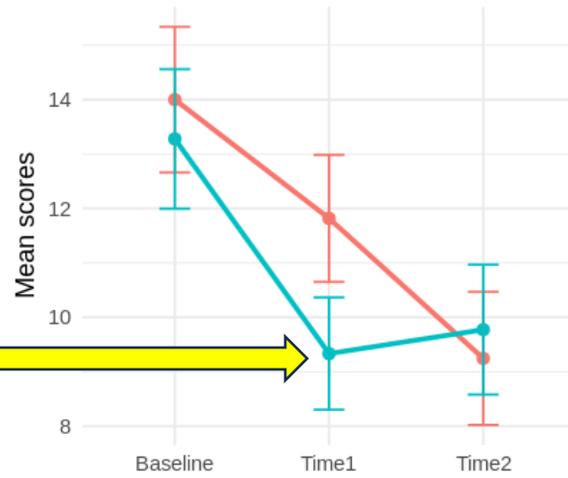

Participant Age

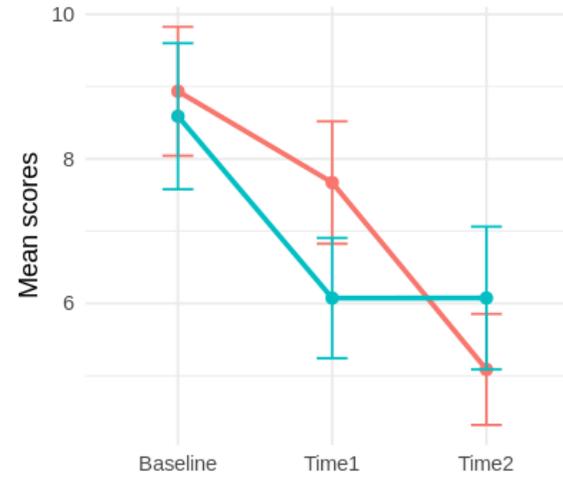

Gender of person using AOD

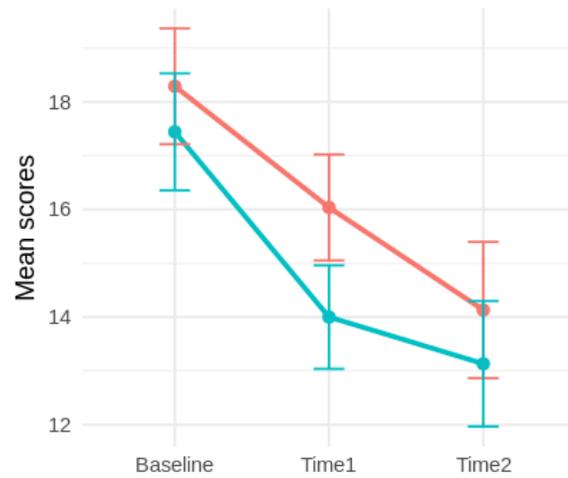

Depression

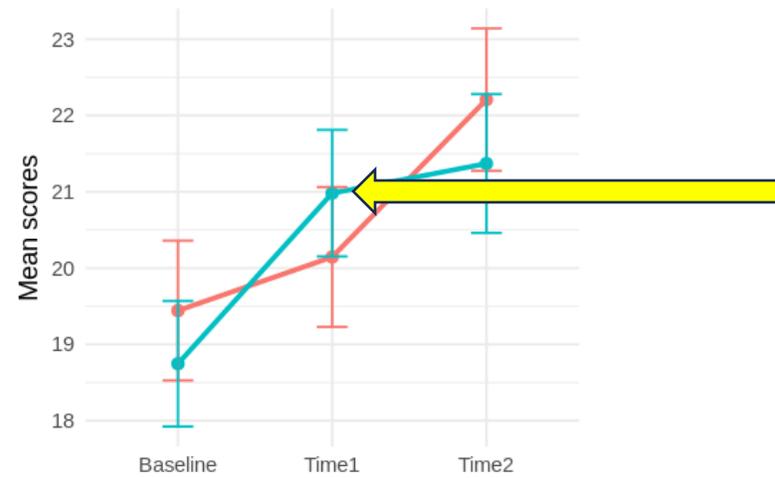

Anxiety

Stress

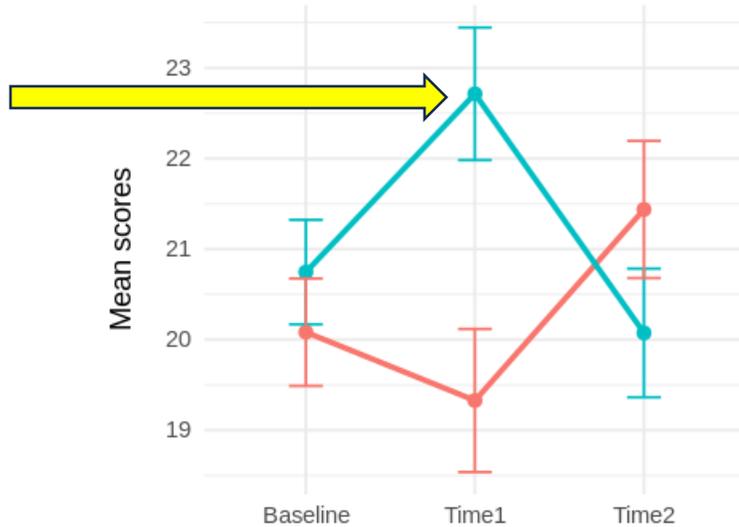

Life satisfaction

Problem Focused Coping

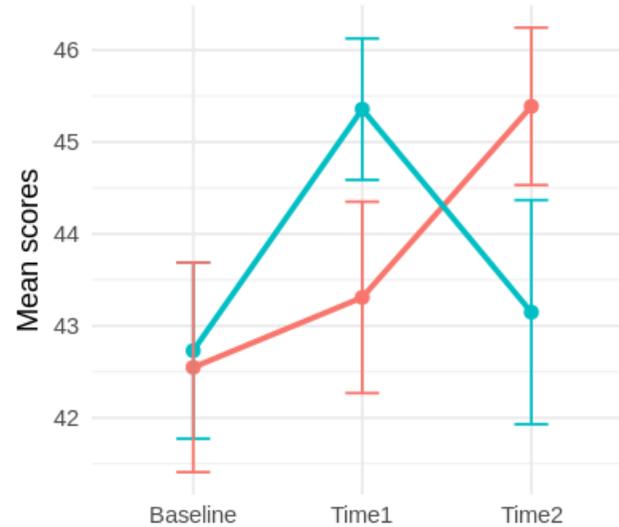

Emotion Focused Coping

Avoidant Coping

Flourishing

—●— Waitlist —●— Intervention

Experiences of CRAFT

**Communication
strategies**

**Mental health
strategies and self
care**

**Practitioner's
understanding
and flexibility**

**Professional
support for CSO**

Next steps

- Articles
 - Effectiveness of online CRAFT to rural Australians – RCT
 - Women’s experiences of caring for someone who uses substances in rural Australia
 - The enablers and barriers to accessing support as a CSO
 - The experiences of CRAFT – participants
 - The experiences of CRAFT – practitioners
- Working with Drug and alcohol treatment groups

Take home messages

- Effectiveness of online CRAFT in rural Australia
- First known RCT to deliver CRAFT entirely online in Australia
- Potential to address key access barriers in rural Australian
- Contribute to the increasing world-wide use of CRAFT
- Implications for future funding and support
