

ASMIRT Breakfast Session

CT turned on its head

Introducing multi-positional CT

Saturday, March 28, 7.30 – 8.30

Breakfast provided.

Canon Medical is redefining CT imaging with the world's first multi-positional CT system.

Be among the first in Australia to experience Aquilion Rise—a breakthrough combination of weight-bearing and conventional CT imaging.

Join us at the Canon Medical ASMIRT Breakfast Session and discover how this technology can unlock new diagnostic possibilities, improve patient care, and streamline clinical workflows. This is your chance to preview a system that's set to reshape the future of CT.

Why Attend:

- **Why weight-bearing CT matters**

Learn how assessing patients under load delivers more accurate insights for an expanding range of clinical areas, revealing functional changes that are often missed in traditional imaging.

- **Behind the innovation**

Gain a deeper understanding of the development journey and the clinical thinking that shaped this breakthrough technology—and why vertical CT is emerging as a new standard in advanced imaging.

- **Bring actionable knowledge back to your team**

Explore how adopting multi-positional imaging can enhance your service offering and support improved patient outcomes.

- **Prepare for the future of imaging**

With vertical CT poised to reshape conventional workflows, this session will help you anticipate the impact, plan for integration, and stay ahead of evolving clinical expectations.
