

Faster triage and risk identification for better client and clinic *outcomes*.

Deliver better client outcomes, with standardised, evidence-based care.

60–80%

Reduced wait times

2.6x

Higher client engagement

27%

Improved clinical response

Clinically-validated and research-backed*

- Collaboratively build client's personalised care plan, and see up to 2.6x higher client engagement and 27% improvement in clinical response rates
- Collect ongoing feedback from clients outside of sessions, with predictive analytics to identify high risk clients and automated escalation processes
- Combine quantitative and qualitative feedback from clients to inform care plans and measure the impacts of factors such as pharmacology

With over 20 best-practice assessments, your clinicians are supported in asking the right questions at the right time.

Assessment results are easy to interpret and available to both clinician and client, assisting with diagnosis and joint decision making.

Automate client assessments and outcome tracking

- Distribute, collect, evaluate, and record client assessments automatically
- Multi-dimensional assessments provide a comprehensive overview of a client's situation
- View client responses over time, measure improvements and deteriorations, and note significant events to provide context to the data

Empower your clinicians to be the best version of themselves in every session, with Innowell.
