**MediRecords**

MediRecords: Frontline Clinical Software

About MediRecords

MediRecords is a cloud-based electronic health record and patient management platform. Trusted by healthcare professionals in general practice, specialist care, government agencies, emergency services, and the Australian Defence Force, MediRecords specialises in secure data sharing using API and FHIR standards.

With ePrescribing, telehealth integration, appointment management, and a growing range of assessment tools, we are a reliable and secure cloud software solution for mental health professionals, supporting frontline personnel.

MediRecords' core strengths

Connectivity
MediRecords is a leader in Fast Healthcare Interoperability Resources (FHIR) technology for secure, real-time data sharing and analytics.

Flexibility
MediRecords is used by multidisciplinary teams including doctors, nurses, psychiatrists and psychologists providing face-to-face care and virtual care.

Scalability
MediRecords can scale with your team — from sole practitioner clinics to geographically diverse telemedicine teams to enterprise deployments on client infrastructure.

Workforce ready
MediRecords is a software as a service product with features and integrations designed specifically for frontline workforces.

Key benefits

- 100% cloud solution - No need for hardware, software installation or security patches

- Streamlined prescribing with integrated clinical decision support

- End-to-end billing and claiming - Maximise revenue and reduce rejected claims

- Work from anywhere you can access the Internet

- Correspondence and Care Plan templates

- Case Management, Group Appointments and hospital inpatient management
