**AM** Quartex

# Showcase your archives

**Showcase your digital archives, engage your user communities and amplify voices from the past with AM Quartex.**

Developed by AM to publish our own award-winning primary source collections, the Quartex digital collections platform combines efficient workflows with cutting-edge technologies such as Handwritten Text Recognition (HTR).

The result is a flexible, powerful and easy to use digital collections platform that enhances search, discovery and accessibility of all your digitised assets.

## Asset management made easy

Access our cloud-based, fully hosted system from anywhere with an internet connection. Publish in as little as a few weeks and launch multiple front-end sites from a single admin interface, whatever the size of your team or level of experience.

Upload assets and metadata with ease using Quartex Uploader and batch edit to save time and efforts, assigning assets to one collection or exhibit, or many. Customise metadata schemas, controlled vocabularies and user profiles as well as harvest data and integrate with a growing network of platforms.

**It's a testament to the usability of the CMS that we were able to just watch a few tutorials and read a little and make the site look as good as it does today.**

**Darryl Stuhr**
Director of Digitization and Digital Preservation Services, Baylor University Libraries.

## Raise the profile of your digital collections

Enhance search and discovery with automated HTR, OCR and AV transcription and create rewarding research experiences with full-text search, dynamic digital exhibits and support of IIIF, promoting access to digital assets across repositories.

With AM Quartex you can build highly visual and responsive sites that meet WCAG 2.1 AA accessibility guidelines. You can generate accurate, editable, fully searchable and downloadable transcripts of manuscripts, printed text and audio-visual assets with a single click. Curate and publish digital exhibits to introduce your collections or complement a physical archive.

> **Quartex will become an invaluable and powerful tool [and] make our digital resources more accessible than ever.**

**Zachary Bodnar**
Archivist,
Congregational Library & Archives

## Support from a global community

If resources are stretched, or you need advice regarding site configuration or uniting disparate archives, talk to us about personalised training and support including migration, design and build services.

Joining the Quartex Community Platform provides access to guides, tutorials and ways to interact with a global network of existing Quartex users.

Further technical support around data cleansing or digitisation is available through our channel partners; experts in their field with whom we have longstanding relationships.

> **Our faculty now has one place to go for everything they may be looking for, while uniting formerly disparate resources adds importance and relevance to our varied collections.**
