

Cathejell

The only paraben free steam sterilised lubrication gel

Adverse health effects of Parabens

- Disrupts the endocrine system leading to adverse health outcomes⁷⁻⁹
- Negatively impacts reproductive hormones in women¹⁻³
- Negatively impacts sperm motility, morphology and quality⁴⁻⁶
- Parabens bioaccumulate, detected in human tissue, fluids, and organs.¹⁰⁻¹²

Cathejell range:

- **Cathejell Lignocaine** 2% includes lignocaine for a local anaesthetic effect.
- **Cathejell Mono** is a pure lubricant syringe (no active ingredient) for use when no local anaesthetic is required, or to reduce potential allergy.

Cathejell has the ideal viscosity for effective dilation and lubrication of the urethra reducing friction and protecting the mucosa during catheterisation.

Innovex

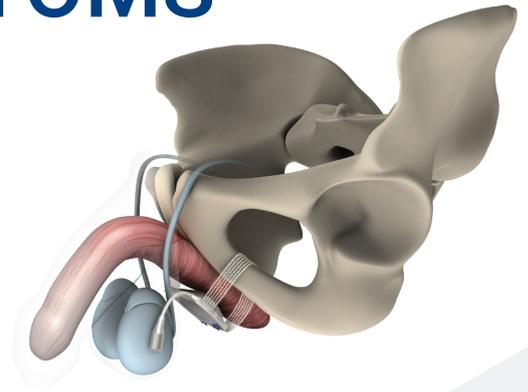

The INNOVEX Single-Use Flexible Endoscope Solution provides superior clarity, covering the endoscopy needs of several departments, while eliminating the cost and risk associated with reprocessing and cross-contamination.

Why choose Innovex?

- Superior Resolution with the look and feel of a reusable Flexible endoscope
- Innovex Flexible Cystoscope and Ureteroscope operate on one DVP
- Integrates into existing theatre equipment
- Fast, easy set-up
- Small footprint digital video processor
- One Digital Video Processor for all the Innovex Single Use Endoscopes

ATOMS

Adjustable Hydraulic system substitutes urinary sphincter function in incontinent males

- Designed to treat all degrees of male stress urinary incontinence
- 93.8% success rate¹ with over 10 years of experience
- Post-op adjustability with no surgical re-intervention
- Hydraulic system with no mechanical parts
- Innovative, Self-anchoring design with four-point fixation

The system is suitable for all degrees of urinary incontinence, and can also be used after radiotherapy.

The ATOMS System combines a range of features to provide an effective, patient-friendly means of managing all grades of SU1.

1. 124 patients experiencing persistent stress urinary incontinence after radical prostatectomy (Hoda, M. R. - *Der Urologe* July 2012; pp. 1-9).

Urgent PC

Outpatient treatment for overactive bladder symptoms

Urgent PC is low-risk with few contraindications and no severe adverse events. Urgent PC is a good option for most patients suffering from urinary urgency, urinary frequency, and urge incontinence

- Outpatient neuromodulation
- Effective in both men and women, regardless of age¹
- Low-risk with few contraindications and no severe adverse events
- May be combined with behavioural and drug therapies
