Understand assessment tools and protocols to evaluate clients' needs.  Pre-conference Workshop: Shoulder Pain and Spinal Cord Injury: Towards a Comprehensive Model of Care  Shoulder pain is the most common musculoskeletal disorder affecting individuals with SCI population representing a personal burden for individuals and an economic burden to society. SPISCI development is influenced by 1] underlying SCI demographics, 2] upper extremity reliance, and 3] psychosocial profile. SPISCI impacts functions that load the shoulder through range of motion (e.g. dressing) or weight-bearing (e.g. transfers). SPISCI develops insidiously, with increased shoulder load being the primary causative agent. Pain provocation tests confirm the source of symptoms and rule out differential diagnoses; the shoulder than bas its mechanics evaluated, focussing on range and strength profiles. SPISCI management aims to improve the shoulders' ability to generate and tolerate functional loading. Respecting pain, and managing it directly where possible, rehabilitation remediates causative mechanical impairments, achieved by a program that 1) strengthens tendons and their supporting musculature through resistance exercise, and 2) promotes loading capacity through progressive functional exercise. This approach is augmented with respect to pain	15:00 Room 15mins 15mins 15:30 7mins	SIRUS  PERSON-CENTERED EMERGENCY PREPAREDNESS FOR PEOPLE WITH DISABILITY Liala Cadelli, Spinal Cord Injuries Australia  SUSTAINABILITY AT THE HEALTH CARE COAL FACE Johnson Paily, Fiona Stanley Hospital  7 minutes Con HEALTH INFORMATION MANAGEMENT AND THE FRONTLINE CLINICIAN: OPTIMISING DOCUMENTATION STANDARDS FOR PATIENTS WITH NEW SPINAL CORD INJURY	INDIAN OCEAN SUITE  SPINAL REHABILITATION MOBILE APP Phan Vu Son Nguyen, Fiona Stanley Hospital  A TECHNOLOGY-FOCUSED SERVICE WITHIN A REHABILITATION SETTING: THE HABITEC LAB Soo Oh, Princess Alexandra Hospital  current Sessions  SETTING ME UP OR HOLDING ME BACK?: THE PERSPECTIVES OF PEOPLE WITH SCI ON REHABILITATION SUPPORT AT INPATIENT DISCHARGE AND 3 MONTHS POST-DISCHARGE FROM HOSPITAL Prof Timothy J Geraghty, Griffith University	13:30	Workshop FROM ONE LIFE TO ANOTHER – HOW ADOPTING A SOCIAL LENS TO REHABILITATION CAN HELP PROMOTE SUSTAINABILITY FOR PEOPLE WITH SPINAL CORD INJURY Dr Johnny Burke, Mrs Hannah McPierzie & Dr Leanne Rees, Murdoch Children's Research Institute  15minute b Plenary 4: Sexual he Speakers: Dr Chloe Bryant, Ebo	Peer Support Fundamentals : Facilitation and Sharing Stories about Livin Well with SCI Tim Rushby-Smith - Skills for Independence & Komal Adarkar, Spinal Cord Injury Service  reak  alth and intimacy in SCI	
13:00	Rey Takeaways:  - Develop confidence in Identifying gaming as a suitable option for clients.  - Gain skills to research gaming solutions using the right keywords.  - Understand assessment tools and protocols to evaluate clients' needs.  Pre-conference Workshop: Shoulder Pain and Spinal Cord Injury: Towards a Comprehensive Model of Care  Shoulder pain is the most common musculoskeletal disorder affecting individuals with SCI population representing a personal burden for individuals and an economic burden to society. SPISCI development is influenced by 1) underlying SCI demographics, 2) upper extremity reliance, and 3) psychosocial profile. SPISCI impacts functions that load the shoulder through range of motion (e.g. dressing) or weight-bearing (e.g. transfers). SPISCI develops insidiously, with increased shoulder load being the primary causative agent. Pain provocation tests confirm the source of symptoms and rule out differential diagnoses; the shoulder food being the primary causative agent. Pain provocation tests confirm the source of symptoms and rule out differential diagnoses; the shoulder then has its mechanics evaluated, focussing on range and strength profiles. SPISCI management aims to improve the shoulders' foility to generate and tolerate functional loading. Respecting pain, and managin di flarcetly where possible, rehabilitation remediates causative mechanical impairments, achieved by a program that 1) strengthens tendons and their supporting musculature through resistance exercise, and 2) promotes loading capacity through progressive functional exercise.
