

CONCRETE POSTS VINEYARD TRELLISING

*Support your vines for generations
with Australian Concrete Posts*

A vineyard is something to last generations. It makes sense to build a trellis that will support your vines for generations without disturbing the plants. That's why using concrete posts is a wise investment. Build your trellis once, support vines for generations! Some of the benefits of using concrete posts;

- Extended lifespan
- Resilient and pest resistant
- Safe to the soil—reduced toxicity to soils
- Safe to the consumer—organic safe

Australian Concrete Posts [ACP] are the trusted name in Concrete posts across Australia.

Australian Concrete Posts' products are used extensively in horticulture for vineyards, fruit production, to support trellis and irrigation systems as well as the agricultural sector for all types fencing in all sorts of environments.

These are safe and strong structures that can last for centuries without affecting our ecosystem.

Prestressed concrete posts reduce soil toxicity. They are very resistant to the outdoor environment over a long period of time.

They offer high load capability due to concrete prestressing.

***Lifetime guaranteed -
No rot, No burn, No termites!***

DRIVING CAPS

Driving caps for a Drop Hammer Drivers

DRIVING CAPS

Available in two sizes, use the correct cap for the post you're driving to avoid chips and for safe fit onto post.

1. Driving Cap Small for intermediate Posts (110mm wide and 130mm wide posts)
2. Driving Cap Large for Strainer Posts (170mm wide posts)

TIPS:

ENSURE THE CAP IS FLAT AND STRAIGHT under the hammer and on the top of the post to avoid chips on the post edges.

NOTE: If using a percussion driver—turn pressure of machine RIGHT DOWN and also ensure a thick layer of belt rubber between the top of the post and the driver head. MORE INFO on the website.
