Australian Stock levels

**More Usage than
was forecasted in
Australia in 2024**

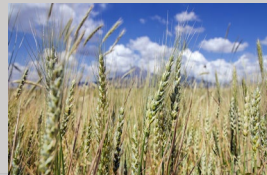

**unpredictable shipping
times are still a challenge**

GOOD NEWS

**More efficient
planning has
eliminated product
shortage**

What Fumigant should I use?

- What makes a good fumigant to apply to grain in storage?

Controls a broad range of pest range & lifecycles

No adverse effects on grain storage facilities and equipment

Flexible to fit operational schedules

Not flammable or combustible

Distributes throughout the grain

Low sorption

Ease of setup and use

No stored product pest resistance

Dedicated support from manufacturer and distributor

ProFume® for Grain Storage

- ProFume® fumigant is used to control all life stages (egg, larva, pupa and adult) of stored product pests
- ProFume is relatively inert meaning it will not react with items such as rubbers, foam, electronic equipment that are sometimes used in silo or grain storage facilities. It is noncorrosive to any metals
- Utilizing the ProFume Fumiguide® provides the flexibility to meet specific time needs while still applying the right amount of fumigant to achieve control

ProFume® for Grain Storage

- ProFume® fumigant is nonflammable or combustible
- ProFume is odourless, colourless and tasteless No off-tastes or odours are present in tested commodities following a fumigation with sulfuryl fluoride
- Sulfuryl Fluoride is a true gas with high vapour pressure. These two factors mean that sulfuryl fluoride disperses quickly throughout treated spaces and commodities and aerates quickly once it is no longer confined.

ProFume® for Grain Storage

- ProFume® is very easy to set up and does not need any extra equipment such as heat exchangers to use.
- **No stored product pest resistance documented!!**

Break the Resistance!!

Dedicated Support

- Douglas Products have invested in local experienced support and partnering with TriCal's knowledge to enhance assistance to ProFume® users in Australia.
