

# eALLIED HEALTH

Enabling digital transformation  
for Allied Health, Scientific and  
Technical

3.12.2024  
HAMILTON

With a key focus in health  
around clinician led change,  
how do we become  
the drivers of digital  
innovation?

## KEY QUESTIONS TO EXPLORE

### From strategy to community

How does high level strategy  
translate to digital innovation in the  
community?

### Connecting to enable digital innovation in Aotearoa

How can we learn from the  
challenges and success of other  
innovation? How does AHST stay  
connected with digital innovations?

### GenAI in clinical practice: Is it worth the risk?

Is the potential of generative AI in  
clinical practice worth navigating the  
risks and ethics? Will the use of AI be  
limited to only non-clinical tasks?

### A digitally enabled workforce from immigrant to native

Digital tools are here, dashboards  
are a buzz word - but are we ready?  
How can we ensure confidence and  
competence in digital health and  
health informatics?

### Not everything that counts can be counted and not everything that can be counted counts

How we do move from collecting  
data to providing meaningful  
information that promotes the value  
of AHST?

## KEYNOTE SPEAKER

**Jacqui Lunday** is the newly appointed  
Chief, Allied Health, Scientific, and  
Technical at Health New Zealand –  
Te Whatu Ora. Jacqui was the chief  
health professions officer for the  
Scottish Government before moving  
to work in Waitaha Canterbury  
in 2018 and believes allied health  
professionals are at the forefront of  
transforming healthcare.

### Organiser

The National Allied Health Scientific  
and Technical Interest Group  
(NAHSTIG) is an online community  
for Allied Health, Scientific and  
Technical health professionals  
who have an interest in, a role for  
or oversight of digital health, data  
and informatics in the health and  
disability system.
