

Provation[®] iPro

/Core Solutions

Provation iPro, is the first mobile, multi-platform, cloud-based Anaesthesia Information Management System (AIMS) designed and perfected by practicing anaesthetists. Integrated with Sunrise[™] EMR, it produces a legible, complete anaesthesia record to ensure accuracy for compliance, billing and regulatory reporting.

How Provation iPro can help

Antiquated, paper-based anaesthesia records

Produces a complete and reportable electronic anaesthesia record, making the billing and regulatory reporting process simple. Delivers the ability to measure interventions and outcomes more efficiently.

Anaesthesia limitations on mobility

Runs on a device-agnostic platform that enables Anaesthetists to document from any anaesthetising location, including the OR, Radiology, Endoscopy, Cath Lab and Electrophysiology.

Siloed patient data

Integrates with Sunrise EMR to ensure the anaesthesia provider's access to patient data is convenient and pertinent to patient care.

Technology adoption

Offers a solution that was designed by an anaesthetist, integrates with the anaesthesia provider workflow, enables customisation and was voted #1 in KLAS for 2017. Outperforms all other anaesthesia vendors in usability and ease of use, and supports wireless capture of hemodynamic monitoring and anaesthesia machine values.

Key Features

- **Cloud-based mobile or multi-platform AIMS**—The Provation iPro app is device-agnostic, compatible with iOS devices, Android, Surface or most desktop computers.
- **Wireless data capture from anaesthesia machines and monitors**—The solution eliminates manual recording of vital signs and anaesthesia machine values by capturing them automatically and wirelessly.
- **Robust data mining capabilities**—Provation iPro electronic documentation produces a complete, legible and compliant record, making real-time data mining, prompt charge capture and reporting possible.
- **Digital consent forms**—A paperless solution, Provation iPro captures patient signatures on consent forms and includes them in the anaesthesia record.
- **Imbedded picture documentation**—Provation iPro uses the native device camera functionality for image capture and includes it in the anaesthesia record.
- **Interface capabilities with Sunrise EMR and billing companies**—Provation iPro is integrated with Sunrise EMR. Interface with billing companies enables automated processing of professional charges.
- **Case status and anaesthesia staff monitoring**—Helps organisations track case progress and anaesthesia staff using Provation iPro Traq board.

Challenges we address

- **Ever-changing compliance and regulatory requirements**—Paper-based anaesthesia records delay regulatory reporting and require full-time employees to review anaesthesia records for accuracy related to compliance and billing.
- **Need for an EMR-compatible and continuous patient record**—Information-sharing between hospital EMRs and anaesthesia records are often clumsy and siloed, leading to operational inefficiencies.
- **Need for an easy-to-use Anaesthesia solution**—Anaesthetists need an easy-to-use technology solution compatible with their workflow, not disrupting patient care.
- **Anaesthesia beyond the operating room**—Anaesthesia needs a solution that covers all anaesthesia events, not just those in the OR.

- **Templates to optimise charge capture**—Provation iPro supports customisation of templates to make charting efficient and optimise charge capture.
