

Connect your organisation with a single instance of Australia's first FHIR native, mobile enabled Patient Administration System

Kyra PAS is Telstra Health's Patient Administration System Solution. Understanding the barriers and gaps in current PAS market solutions, Kyra PAS is designed to bridge workflows, eliminate multiple data sources and grow with singular or multi-site health organisations to ultimately form a foundation to all healthcare.

Kyra PAS's user-centric design, ensures an easy to use, intuitive experience on desktop, tablet or mobile. The flexibility of the solution and its modules mean that customers have the option to run a pilot, implement specific sites at a time and eliminate implementation risk often faced with other solutions.

Key Benefits

A single Instance of PAS for your entire organisation regardless of size

Kyra PAS supports singular or multi-site health organisations, eliminating siloed workflows across departments and sites and growing with you from the point of implementation.

Clear migration path from your existing PAS

Unlike other PAS solutions, Kyra PAS utilises a flexible Clinical Data Repository (CDR), a comprehensive health data fabric and integration platform that supports the safe migration from legacy PAS solutions to Kyra PAS. This means that Kyra PAS can be run alongside an existing PAS and replace legacy components in a planned and deliberate order, eliminating the need for risky "big bang" implementations.

Affordable Investment

Kyra PAS is a cloud hosted and managed service, avoiding typical capital and operational maintenance costs. The team at Telstra Health have developed a PAS solution that revolutionises traditional PAS offerings, without requiring customers to have extensive in-house IT support for Telstra Health solutions.

Reporting

Kyra PAS enables organisations to seamlessly extract data to support mandatory government reporting.

Experts in change management, implementation and hospital workflows

Telstra Health is backed by 25 years' experience in implementing hospital software solutions at scale. The team are experienced in change management and realignment of workflows to take advantage of the new capabilities and shared information.

Modern Architecture

Kyra PAS facilitates the seamless adoption of an open industry standards-based data model (FHIR) and common terminologies (SNOMED CT) so that data can be readily shared, understood and leveraged across systems (e.g., analytics, reporting, business process automation engine) without requiring custom-made design and development effort.

Secure

Kyra PAS meets industry leading standards for cybersecurity and is hosted locally by Telstra Health in Azure Cloud. With automatically generated name, date and time stamps, auditability of the solution is ensured and in the rare event of a system outage, recovery support is guaranteed.

Compliance

Kyra PAS complies with relevant laws, policies and regulations and is routinely updated and modified to meet new requirements without disruption to system availability.

Key Modules

Patient Record

Manage the patient journey stages throughout the hospital service, including patient record, medical record, recording of procedures and diagnoses.

Billing

Automatically bill health funds, Medicare and patients directly (where applicable) via PowerBilling integration, PowerHealth's premier billing software.

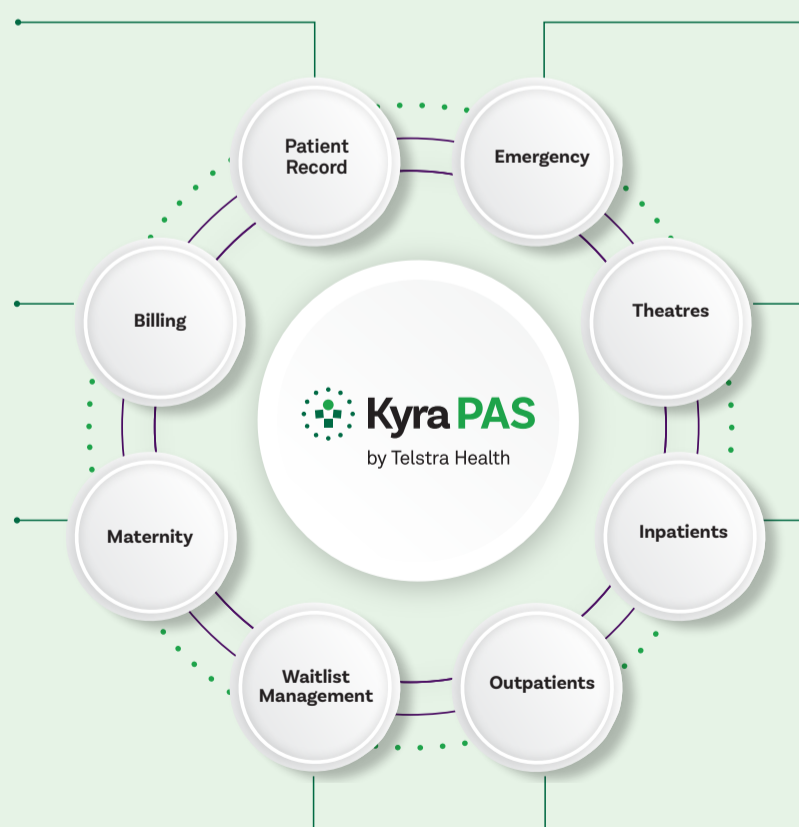

Maternity

Manage patients who arrived at hospital for all maternity services.

Waitlist Management

Manage patients who have been waitlisted for surgery with ease via integrated patient communications and scheduling.

Emergency

Oversee status and manage patients within the emergency department and their subsequent transfer to other wards or discharge.

Theatres

Facilitate the scheduling of clinical teams, resources, and the patient for surgery.

Inpatients

Coordinate seamless allocation and transfer of patient to wards and transfer between wards, sites and hospitals, whilst simultaneously sharing information with patient flow solutions.

Outpatients

Coordinate the acceptance of referrals and scheduling of patients for outpatient services and seamlessly integrates with queue management solutions.
