

interRAI for Community Aged Care in Australia

*interRAI systems offer unique advantages to a wide range of users: **care givers, consumers, administrators and government.***

Design Principles

- Standardised data across all stages and settings of the aged care system: system entry, eligibility & care delivery.
- All programs utilise the same core systems of assessment.
- Data is collected once & used multiple times within each episode of assessment.
- Assessment depth matches case complexity.
- Information moves with the older person as they traverse system entry & eligibility assessment & subsequently receive services.

Advantages

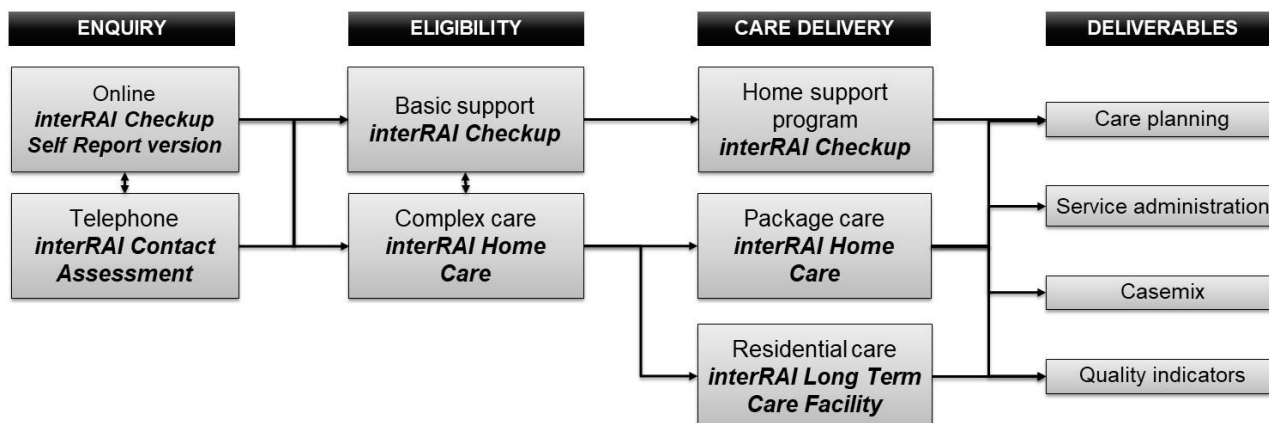

- Robust, relevant clinical observations
- Elegant derivative applications to guide care planning & support administration
- Companion systems for integrated care across health & welfare systems
- Compatibility with other nations
- Quality measures without data burden

*At every stage, data is **collected once, used many times.***

System components

- interRAI **Home Care** for complex care
- interRAI **Checkup** for basic care
- interRAI **Checkup Self-Report** version for system entry self-service
- interRAI **Contact Assessment** for initial screening & assessment preparation

*The interRAI 'suite' ensures information is **identical in every setting** across every process.*

Integrated information available at every point of contact
