CASE STUDY

Western Sydney LHD Long COVID survey

Western Sydney LHD and Healthily have developed online and voice AI surveys to screen and identify people in western Sydney with Long COVID and provide support to those with ongoing symptoms.

The combination of online surveys and automated phone calls will be utilised to efficiently reach the impacted population, including those with low-English proficiency and low literacy.

GoShare Voice enables WSLHD to risk-stratify, prioritise and deliver tailored interventions to different segments of the western Sydney community.

GoShare Voice and GoShare bring significant cost savings and workload efficiencies that would be difficult to achieve through human resources.
