# Medical Imaging Requisition Management™

## eRequisition Management, Workflow Management, and eProtocolling

The Novari Medical Imaging Requisition Management™ (MIRM) software module eliminates paper and dramatically improves the department's requisition workflows for radiologists, technologists, clerical staff, and hospital leadership.

### Features

#### Complete and Appropriate MI Requisitions

Incomplete or clinically inappropriate medical imaging requisitions are inefficient and unnecessarily delay patient care. Novari MIRM™ enables mandatory referral data sets, so requisitions received digitally are always complete and appropriate. Referrals received via fax can easily be reviewed for completeness and appropriateness and if required, quickly returned to the sender with one of many templated notes.

#### Configurable for All Modality Workflows

Novari MIRM™ can be configured for the specific clinical and administrative workflow needs of each hospital. The information collected, routing options, and workflows can be specific for each requisition type. Workflow steps for each modality can range from simple to complex and involve many clinical and administrative roles.

#### Paperless Requisition Management and Workflow Management

Streamline your requisition workflows by removing paper and fax from your medical imaging department's requisitions, for all modalities, from receipt to scheduling, including the option of eProtocolling.

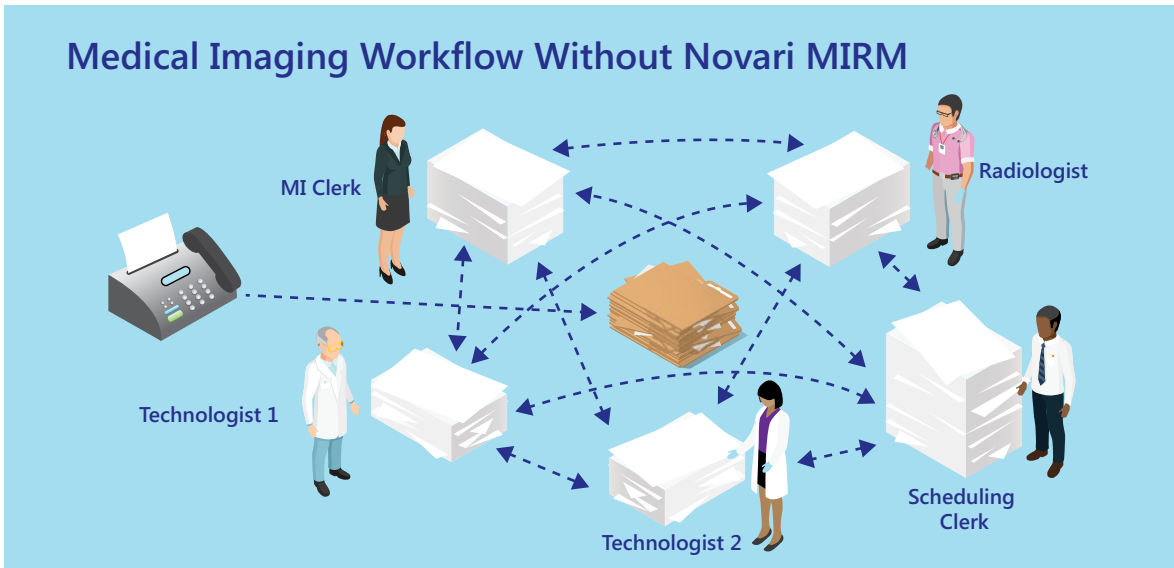

#### Know the Status and Location of Every Requisition in Real-Time

When using paper and fax, referring physicians frequently are unaware of the status of their requisitions. The Novari Medical Imaging Requisition Management™ software module displays the status of each requisition as it moves through the system.

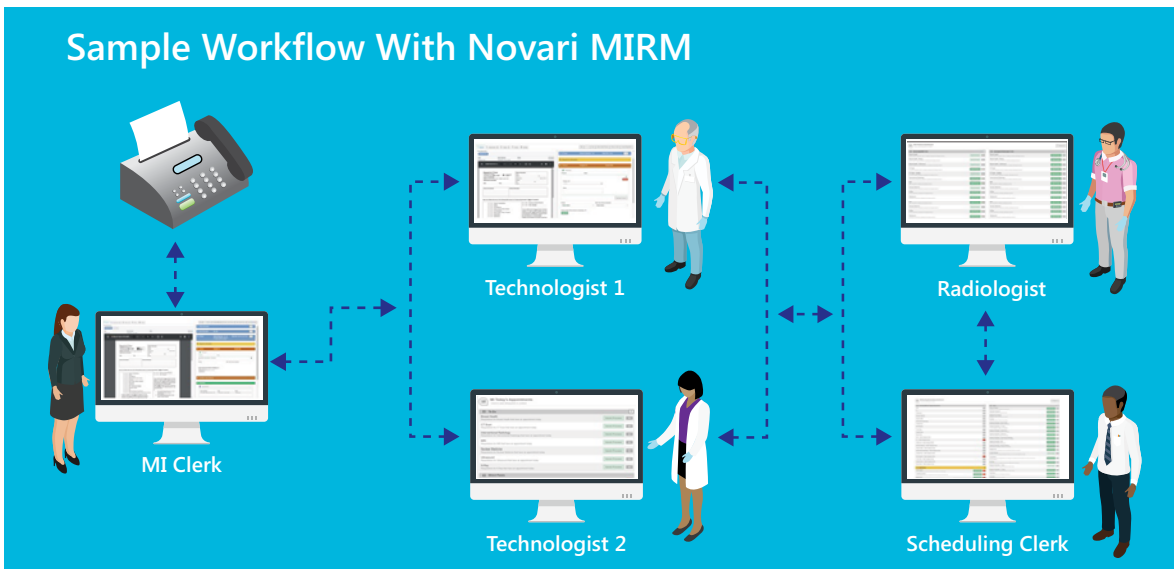

*"Like many organizations that are using paper-based requisitions, a significant amount of effort is spent by staff and physicians at GBHS managing the flow and access to that form. Digitizing the requisition will allow us to streamline our processes and open up opportunities such as remote protocolling, which is a positive step forward for our Radiologists and Medical Imaging teams, especially during a pandemic."*

*– Rob Lee, Vice President, Information Management  
& Technology, Chief Information Officer,  
Grey Bruce Health Services*

## Medical Imaging Workflow Without Novari MIRM

## Sample Workflow With Novari MIRM

### eProtocolling

Novari MIRM™ includes the convenient option for technologists and radiologists to quickly eProtocol requisitions at anytime from anywhere and without being dependant on physical access to the paper requisitions.

### Integration

Novari Medical Imaging Requisition Management™ can integrate with electronic health record (EHR) and radiology information system (RIS) (e.g., Cerner, Meditech, iPM, WebPAS, etc.).

### Patient Notifications

In today's world patients often expect to receive electronic update notifications. Novari MIRM™ can send both email and text (SMS) appointment and other notifications to patients. Doing so reduces the time and cost of contacting patients and reduces expensive "no shows". Appointments scheduled in hospital enterprise scheduling systems (e.g., Cerner, Meditech, iPM, WebPAS, etc.) can trigger automated patient notifications in Novari MIRM™.
