Medical histories to predict FGR/SGA

*Medical histories
could predict
pregnancy
outcome.^{8,9}*

- Only 19.5% of women with ≥ 1 major *risk factor for FGR* had evidence of serial third trimester ultrasound assessments.⁶
- A health insurance claim database abundantly records *medical history*, thus, it allows its proactive screening, particularly in countries with *universal health coverage*.⁷

Clinical utility

Discrimination ability and robustness

Previous studies

- Required ultrasound or biomarkers and a specific range of gestational age: (1) 25~42 weeks [12]; (2) 10~14 weeks [13]; and (3) 30~35 weeks [14]
- The DI-VNN were competitive to those models.
- **External validation** also estimated the DI-VNN to outperform the previous model [13].
- Evaluation of the previous models [12, 13, 14] also used **training set only**, which might be overoptimistic.

Strength

- No requirement for ultrasound or biomarkers.
- A general population of pregnant women without a specific gestational age range
- Unlike the previous studies, we conducted external validation to estimate the future performance of the DI-VNN.

Limitations

- The accuracy of DI-VNN was only moderate.
 - However, similar accuracies were achieved by the previous models,
 - Although they should be systematically reviewed to ensure all comparable models are included (currently under reviewed).
- The impact of DI-VNN on patient outcomes is also still unclear.
 - Yet, many previous studies in medicine have yet to evaluate the impacts of their prediction models [15].

Acknowledgments

- The BPJS kesehatan in Indonesia permitted access to the sample dataset in this study.
- This study was funded by:
 - (1) the Postdoctoral Accompanies Research Project from the National Science and Technology Council (NSTC) in Taiwan (grant no.: NSTC111-2811-E-038-003-MY2) to Herdiantri Sufriyana; and
 - (2) the Ministry of Science and Technology (MOST) in Taiwan (grant nos.: MOST110-2628-E-038-001 and MOST111-2628-E-038-001-MY2), and the Higher Education Sprout Project from the Ministry of Education (MOE) in Taiwan (grant no.: DP2-111-21121-01-A-05) to Emily Chia-Yu Su.
