Director of Governance and
Programs
Doctors on Demand

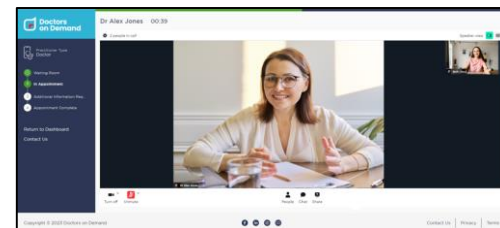

MediRecords

MediRecords is a cloud-hosted electronic health record and patient management system used across Australia by sole practitioners, multidisciplinary clinics, hospitals, government agencies and, importantly, virtual care providers such as Doctors on Demand.

Doctors on Demand

Doctors on Demand is leading innovation in Australian virtual care by providing access to trusted and quality healthcare through video consults available anywhere, 24 hours a day, every day.

Question 1

What challenges did you face when using traditional server-based practice management software?

Question 2

How has Doctors on Demand utilised MediRecords' Connect API platform to streamline workflows and overcome the challenges of siloed data and incompatible software systems?

Question 3

What role can MediRecords play in supporting Doctors on Demand's future initiatives?

Thank you
