About iQRenew

iQRenew is a recycling company focused on transforming how recyclable materials are processed.

Through advanced sorting technologies and strategic partnerships, we create more efficient recycling systems that maximise resource recovery and minimise environmental impact.

We operate a number of primary and secondary recycling facilities.

Our Values

- ✓ **Traceability** – we ensure materials are traced throughout the value chain
- ✓ **Locally Made** – we support Australian innovation and manufacturing, in fact all our processing is local
- ✓ **Value for Money** – we deliver competitive pricing for recycled content
- ✓ **Positive Environmental Impact** – we're reducing waste in landfill and displacing virgin plastic
- ✓ **Buy Back** – we collaborate with partners who not only process material through our facility, but are committed to supporting the circular economy by buying back recycled products.

SPEC Facility

iQRenew has built **Australia's first purpose -built site** dedicated to processing post consumer soft plastics. Located near Taree on the NSW Mid-Coast, the facility is the missing link for Australia's recycling infrastructure.

SPEC stands for Soft Plastic Engineered Commodity. SPEC is dedicated to sorting and processing 100% post-consumer soft plastics to create three products: spec pellets, spec flake and spec shred.

SPEC is the culmination of over five years of rigorous testing, trials, investment and innovation, reflecting iQRenew's dedication to addressing Australia's recycling needs.
