Complete Solution

Our Services

For Governments & Operators

Our Transit Management Systems (TMS) and Driver Console Units (DCU) are both cost effective and comprehensive.

TMe contains a range of operational capabilities that allow both Governments and Operators to meet transport and contractual requirements, whilst at the same time offering the travelling public an advanced Smart Ticketing solution that provides a level of information not before seen in the transport industry,

For Schools

Our TMS enables schools to track student buses, reconcile payments with Smartcards, create electronic student manifests, and send live alerts to parents and schools. It's a versatile tool for managing student transportation needs, including regular travel, excursions, and other events. Our groundbreaking Clear of Bus Check is an end to end safety initiative - with the aim to ensure no school child is left on a vehicle.

For Passengers

The TMe Passenger App offers a range of unique features, including Real Time Vehicle Tracking, live alerts for Smartcard boarding and de-boarding patterns, and push notifications for delayed buses. The app also allows for full Smartcard Account Management and communications from Operators.

Transportme is the leading Transit Management System in the Australasian Bus Industry, trusted by Governments, Bus Operators and Schools. Multiple State Governments have contracted the TMe solution and is utilised in over 1000 Bus Companies and Schools since 2013.

TMe is an Australian technology company that offers an innovative and cost-effective Transit Management System (TMS) and Driver Console Unit (DCU), that encompasses a suite of products which provide solutions for Metro and Regional Public Passenger and School Transport services operated by private bus operators, educational institutions and Government agencies across Australia, New Zealand and the South Pacific.

Founded in 2013 and operated by a team of bus industry experts, TMe has a unique and deep understanding of the bus market, with our solutions and operational support model providing operators with the tools to meet their contractual requirements whilst also improving operational efficiency and unlocking enhanced safety and assurance features for passengers and students.
