

Tech Solutions

Tailored For Bus Operators

Optimise bus operations with scalable software solutions to improve service delivery and increase ridership.

Intelligent Transport Systems (ITS)

Integrated technology to plan, operate and monitor bus operations provides and ensures your services run efficiently and effectively. Reduces average wait times and increases service reliability.

Austrics Planning & Scheduling Solutions

AUSTRICS Optimiser's flexibility and superior optimisation capability delivers everything bus operators need to run their business as efficiently and profitably as possible – easily addressing the most complex planning and scheduling requirements.

TIMS Enterprise Resource Planning

ERP tailor-made for bus provides a complete source of information for all aspects of your organisation. Improves efficiency and leverages valuable business data using a single technology platform.

Electric Vehicle Solutions

Our Electric Vehicle fleet optimisation software monitors and manages EV operations, providing valuable insights that enable the industry to deliver more efficient and effective services – helping the transition towards zero-emission bus fleets.
