

Pet Owner Websites

Dechra's education and support includes these dedicated websites

Cats & Dogs

Hyperthyroidism

Cats with hyperthyroidism have overactive thyroid tissue, which produces too much thyroid hormone. As a result, this causes an increase in metabolic rates, leading to weight loss among other symptoms.

www.feline-hyperthyroidism.co.uk

Hypothyroidism

Hypothyroidism is a decrease in the thyroid hormones produced by the thyroid gland, often seen in middle to older aged dogs. An underactive thyroid can have negative consequences on the body's metabolism.

Hyperadrenocorticism

Cushing's Syndrome seriously affects a dog's health, vitality and appearance. Also known as hyperadrenocorticism, it is a common endocrine disorder, occurring mostly in middle to older aged dogs.

Hypoadrenocorticism

Also known as Addison's disease, is an endocrine disorder caused by the dog's adrenal glands not working as they should in producing steroid hormones, cortisol and aldosterone.

Heart failure

If your dog is diagnosed with heart failure, it is useful to know how a healthy heart functions.
