

HEARTBURN?

ZANTAC IT!

**STARTS
TO WORK
IN 30 MINS** ^{1,2,3}

**FOR ALL DAY
SYMPTOM
RELIEF**

ZANTAC is the only H2 Receptor antagonist available OTC in Australia

ZANTAC contains ranitidine (as hydrochloride), a histamine-2 receptor antagonist (H2RA) medicine used for relief of heartburn and acid indigestion due to gastro-oesophageal reflux.

The TGA has reinstated ZANTAC (ranitidine) tablets

In September 2019, the TGA removed all medicines containing ranitidine over concerns about the level of nitrosamine impurities, specifically N-Nitrosodimethylamine (NDMA). The TGA evaluates all registered medicines for safety and efficacy. Aspen Pharmacare Australia, the sponsor of **ZANTAC** tablets, has worked with the TGA to demonstrate that nitrosamines are controlled within the internationally established daily limits.

What remains unchanged?

The active ingredient in **ZANTAC** tablets, ranitidine, remains unchanged.

The dose of ranitidine (as hydrochloride) is also the same. Available as 150 mg and 300 mg tablets.
