DISPENSE WORKS

Pharmacy software that works.

Intuitive workflow design with fully integrated e-prescriptions and MIMS or AusDI, has made pharmacy dispensing easier and safer than ever.

Seamless integration with POS Works means that accurate pricing and current stock-on-hand data is provided via RealSync.

Enhanced pharmaceutical care

Dispense Works is an innovative, patient-centric dispensary solution utilising modern tools and technologies to deliver enhanced pharmaceutical care. It has full e-health capabilities including e-script scanning and My Health Record (MyHR) integration, implemented in a streamlined design to suit modern dispensing environments.

- Full e-health functionality including e-scripts, Healthcare Identifiers and My Health Record (MyHR)

- Clinical decision support utilising MyHR/OTC information

- Detects 'triple whammy' drug interactions

- Extensive clinical references built in: AMH, LactMed, and Medicines in Pregnancy

- Swipe, scan or type: easy and intuitive dispensing options

- Scan a script, scan a product, scan a fingerprint: dispense without keystrokes

- Record clinical interventions intuitively, at any point of dispensing

- Maintain patient profiles and record clinical services provided

- Seamless integration with POS Works ensures accurate stock levels and pricing

POS WORKS + RX DISPENSE WORKS

The ultimate pharmacy network solution: POS Works retail software linked with direct integration to Dispense Works dispensing softare.

POS Works gives you real-time insight and control over every aspect of your retail pharmacy business, and Dispense Works is designed specifically for the dispensary section of your pharmacies.

Dispense faster while improving patient safety

A full patient profile allows for the easy recording of external and OTC medicines to supplement local dispensing history, as well as medical conditions, allergies and adverse reactions, clinical interventions, vaccinations and observations. An extensive set of reference material is presented within Dispense Works, improving workflow by reducing the need to consult external sources of information such as the 'Australian Medicines Handbook', 'LactMed' or 'Medicines in Pregnancy'.

Clinical decision support is provided by MIMS Integrated or AusDI, comprising drug-drug, drug-condition, drug-allergy and therapeutic duplication warnings. An innovative multi-drug interaction system means that interactions between three (or more) drugs can be identified—also known as the 'triple whammy'. Significantly, interactions can be checked for medicines dispensed in other pharmacies (via the MyHR) or OTC.

Maximise efficiency with streamlined workflow

Dispense Works enables pharmacists to assess multiple scripts against a patient once, rather than one patient against each item being dispensed. A medication summary shows a snapshot of the patient's current regimen allowing changes in brand, dose and form to be identified at a glance.

Easy to use with integrated compliance and tracking

Dispense Works is touchscreen-optimised to allow for easy and quick navigation of clinical and reference information. Fingerprint authentication identifies staff members responsible for each stage of the dispensing process, with each prescription's status tracked from patient to dispensary, to the till, and back to the patient again.

Specialised Australian support

Dispense Works is an Australian owned and operated company. Our support centre is based in Brisbane, and our network of support technicians around the country are ready to keep your pharmacy running smoothly 365 days a year. Our team of in-house pharmacists are also available to provide industry-specific support and training.

MIMS integration

MIMS is the most preferred and trusted source of medicines information for Australian healthcare professionals. MIMS Integrated is built-in and interfaces directly with the Dispense Works workflow.

MIMS medicine information is built on a heritage of local expertise, credibility, and adaptation to changing healthcare provider needs. Their information gathering and analysis methods are proven and robust. MIMS information is backed by MIMS Trusted, a rigorous editorial process that is constantly updated from a variety of sources including primary research literature. The Australian database and drug interactions are locally relevant, clinically reviewed and updated monthly.

The majority of Australian prescribing packages and many dispensing applications—including Dispense Works—are supported by the MIMS medicines database.

Contact POS Works for more information about pricing, subscriptions and access. The MIMS client services team can be contacted for detailed information on MIMS via:

AusDI integration

AusDI is Australia's most comprehensive and up-to-date database of independent drug monographs, pharmaceutical company product information (PI), consumer medicine information (CMI), product summaries, drug product images, interactions and safety monographs.

AusDI is brought to you by MedicalDirector, the leading clinical software provider that powers more than 66 million prescriptions and 70 million consults annually through its platforms.

As a POS Works preferred partner, selected AusDI content is fully integrated with Dispense Works. In addition, the integration also includes in-house drug interactions and safety warnings created by the MedicalDirector Pharmacy Team. This is the same safety data that is utilised daily by Australian GPs in MedicalDirector's clinical applications to support their prescribing requirements, so you can feel confident knowing that you're getting the most up-to-date, trusted and reliable information available.

Contact POS Works for more information about pricing, subscriptions and access. MedicalDirector can be contacted for detailed information on AusDI via:
