

AI-ENHANCED

# Breast ultrasound reporting.

See-Mode automatically analyzes ultrasound images, producing fast and accurate radiology reports.

Reduce reporting time.

Enhance diagnostic confidence.

Improve consistency, eliminate errors.

We're on a mission to unlock the hidden insights within medical imaging, empowering clinicians to improve patient outcomes.

## Automatic lesion detection and characterization.

See-Mode automatically detects lesions in ultrasound images. See-Mode's AI models will characterize the lesions according to ACR BI-RADS guidelines.

## Follow-up examinations are made simple.

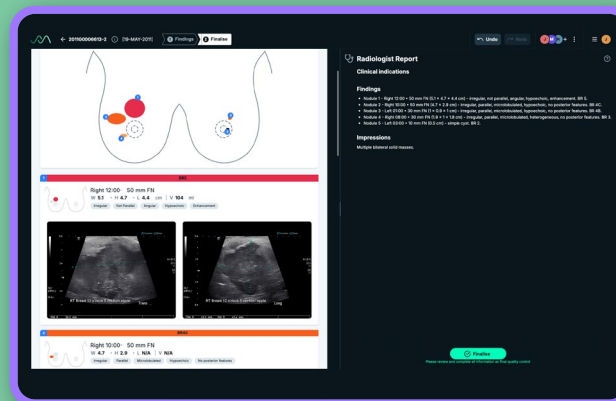

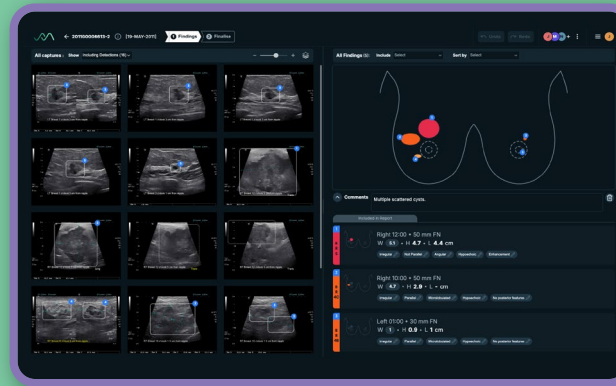

See-Mode allows for easy comparison between previous and new images. Any changes to lesion size and characteristics will be presented for review.

## Worksheets are instantly generated.

See-Mode generates a complete ultrasound worksheet for the examination. The worksheet is sent to PACS or RIS upon being finalized.

## Radiologist reports are pre-populated.

See-Mode pre-populates radiologist report templates with examination findings and preliminary impressions.

See-Mode is easy to integrate alongside your existing workflow and clinical protocols.
