

Medtronic

Support performance improvement while protecting data and budgets

Today, over 50% of surgeons are recording their surgical video and another 30% are considering recording in the future.¹

How will your institution manage this growing volume of data in a secure, usable, and cost-effective way?

Touch Surgery™ Ecosystem is your solution

+ Video

+ Performance Insights

+ Connectivity

+ Live Stream

//

When residents have performed a surgery, I can pull the video up on in the Touch Surgery™ browser and we can go through the case. I cannot tell you how important that feedback is for our residents."

- Dr. David Renton,

General Surgeon,
The Ohio State University
Wexner Medical Center, US

Achieve financial and environmental goals by switching to the cloud

We offer cloud-based storage provided by AWS, which in recent studies can have these benefits over on-premise servers:

- An average of 44% cost savings over 5 years.²
- An average of 88% carbon footprint reduction.³

Easily digitise your ORs

- Broad compatibility with most laparoscopic or robotic systems.
- A simple workflow to access videos and data on desktop or mobile devices.
- Our accredited team installs, trains, and troubleshoots on-site.

The Touch Surgery™ Ecosystem changes the way we practice medicine in a very good way. The surgeon improves his technique⁴ and team performance and we find the videos are very useful in patient conversations.”

- Dr. Daniel Cottam,
Bariatric Surgeon,
Bariatric Medicine Institute, US

+ Touch Surgery™ Video

Simplify the review

- Videos are available within minutes of upload.
- Automatically share videos with trainees.

Protect patient data

- RedactOR™ automatically blurs video outside the body in real-time so patient and staff privacy is preserved.[†]
- Conforms to HIPAA and HITECH and is audited against SOC2 Type II Standards.
- End-to-end encrypted upload to the cloud platform through a secure API.

⁴Based on a RCT in a porcine model. Singh P, Aggarwal R, Tahir M, Pucher PH, Darzi A. A randomized controlled study to evaluate the role of video-based coaching in training laparoscopic skills. Ann Surg. 2015;261(5):862-869.

⁵Data on file

[†]RedactOR is only available for some types of laparoscopic and surgical robotic procedures.

+ Touch Surgery™ Performance Insights

We're building a portfolio of insights to help surgeons identify new ways to advance techniques.

Using AI, most Performance Insights are available within 24 hours of upload.

- Videos are automatically segmented into key procedural phases.
- Case and phase durations are provided for each video and benchmarked to a surgeon's historical cases.
- Time-stamped annotations indicate when an instrument or anatomical structure is in view.

And that's just the beginning. New insights and features are continuously added and pushed out through automatic software updates.

Sample of analyses available.

Please note: Performance Insights are available for select procedures, instruments, and anatomy.

+ Touch Surgery™ Connectivity

When there's a need to revisit a case, a video can really help but it's often difficult to find the file, let alone the key moments.

That's why we offer the option to access a video through a secure link in the patient record.

* OR breakdown is available for hospital sites with two or more DS1's.

** Case tags should be added intra-operatively or post-operatively.

+ Touch Surgery™ Live Stream

Expense, logistics, OR space and time limit opportunities for consistent in-person coaching intraoperatively.

Our solution makes it possible to stream procedural video, operating room video, and audio to participants outside the room to maximize coaching, broadcasting and accessing technical support.

✓ Coaching

Expert

Stream in to provide guidance without endless travel.

Trainee

Stream out to follow-up your training with a 1:1 virtual coaching experience.

✓ Broadcasting

Expert

Stream out to broadcast your skills around the globe.

Trainee

Stream in to learn a new technique from an expert inside or outside your institution.

✓ Connect with Medtronic

- Minimize people added to the OR for product training.
- Contact a Medtronic rep to quickly troubleshoot.
- Interact with Medtronic R&D teams to share ideas.

† RedactOR is only available for some types of laparoscopic and surgical robotic procedures.
