

MRI & Prostate Cancer Diagnosis

Who should attend: Aimed at Urologists and Radiologists with a basic understanding of multi parametric prostate MRI, who wish to improve their understanding of the role, interpretation, and limitations of this diagnostic technique

Date: Saturday 24 August, 2019

Time: 0830 - 1030

Chair: Dr Peter Swindle, Urologist, Mater Hospital & Queensland Prostate Clinic
Associate Professor Stefan Heinze, Deputy Director Department of Imaging
Royal Melbourne Hospital

The role of multiparametric prostate MRI is expanding to become a vital component of diagnostics, staging, and active surveillance, and with the recent updating of PIRADS classification this workshop provides the opportunity to enhance Urologist's and Radiologist's skills in this growing area. For clinicians familiar with the basics of multiparametric prostate MRI but wishing to improve their understanding and interpretation, the course features topics through lectures and case-based learning including:

- Understanding anatomy through MRI
- Tips and tricks of imaging
- MRI-guided biopsy
- Explanation of the newest version of the PIRADS classification
- Case discussion

Please note the program is subject to change
