

Water Industry Operators Association of Australia

Submission of Abstract

This presentation showcases a series of compelling case stories illustrating the practical benefits and transformative impact of Concertor pumps in wastewater management. Through case studies, we will examine how the Concertor's smart, adaptive technology has improved on operational efficiency, cost savings, and environmental sustainability by addressing common issues such as clogging, energy inefficiency, inventory management and maintenance burdens in various settings. Each case story shows common challenges faced by municipals and industrial applications and the solutions enabled to the end user by our Concertor Range. Through quantitative results and end-user feedback, we will address how these pumps can deliver measurable improvements.
