## WS09 – The Design Of Health Technology Assessment Processes Using Evidence-informed Deliberative Processes To Achieve Universal Health Coverage

---

### Facilitators

Wija Oortwijn, Maryam Huda, Lyazzat Kosherbayeva

### Summary

On their path towards universal health coverage, governments need to make choices in the design of HTA processes which may be challenging in countries that have limited HTA experience. This workshop provides practical guidance and assignments on how to make these choices, informed by the theory of evidence-informed deliberative processes, international best practices and practical examples from middle-income countries.

### Outcomes and Objectives

**Learning objectives:** To learn about EDPs and how depending on the country's level of HTA development they can be used in optimizing HTA processes, especially in Low- and Middle-Income Countries (LMIC).

**Outcomes:** Increased understanding on how EDPs can be used to enhance legitimate health benefit package design.

### Structure of Session

- Welcome and introductions
- Lecture: Introducing EDPs Why and how?
- Group exercise 1 & reporting back
- Lecture: The use of EDPs (steps A-C)
- Group exercise 2 & reporting back
- Practical application in Pakistan: defining decision criteria
- Lecture: The use of EDPs (steps D-F)
- Group exercise 3 & reporting back
- Practical application in Kazakhstan: appraisal
- Wrap up
