OntarioMD Products & Services for Clinicians

OntarioMD (OMD) is a wholly owned subsidiary of the Ontario Medical Association and receives funding from the Province to support family physicians, specialists, nurse practitioners, allied health and admin staff to adopt and efficiently use digital health technology to care for their patients and clients. We are here to connect you to provincial digital health tools and educate you on how to incorporate them into your EMR workflows. Help from our experienced staff is always only an email or phone call away and available when it's convenient for you.

OMD EDUCATES

Advance your use of digital health

Peer Leaders

Talk to a physician, nurse or clinic manager for digital health advice

OMD has created a network of over 60 Peer Leaders made up of physicians, nurse practitioners, nurses and clinic managers who are expert users of OMD-certified EMRs and other digital health and virtual care tools. They are available to help community-based practices realize more clinical value from digital tools.

Training and Education

Learn how to use digital and virtual care tools safely and effectively

OMD is committed to helping raise awareness to physicians and their practice staff about digital health through training and education via conferences, webinars, and the Privacy & Security Training Module on OntarioMD.ca. Information about virtual care with a list of virtual care tools, training videos, and webinars led by experienced virtual care users can be found on OntarioMD.vc.

Certified EMRs

There are many EMRs on the market in Canada, but only certified EMRs can integrate with provincial digital health tools such as eConsult, eNotifications, HRM®, and many more to come. They are the gateway to using digital health tools. Certified EMRs have been validated for core functionality and privacy and security requirements to give clinicians assurance that they are using a reliable tool that continues to keep pace with changes in digital health.

Digital Health Drug Repository

Information about publicly funded drugs and pharmacy services, all monitored drugs (regardless of payor) and COVaxON vaccination information is integrated into OMD-certified EMRs from Ontario's Digital Health Drug Repository (DHDR). This gives clinicians direct, real-time access to medication information for their patients. Access is seamless, convenient, and secure.

eForms

eForms automates the completion of forms for patients and reduces the administrative burden on clinical practices. Rather than faxing forms to various organizations, clinicians can submit them electronically from their EMR.

EMR-Integrated eConsult

eConsult is a tool that provides family physicians and nurse practitioners with timely access to specialist advice and often eliminates the need to send patients for an in-person specialist visit. eConsult can be accessed through some certified EMRs.

Health Report Manager and eNotifications

Health Report Manager (HRM®) is an award-winning digital health tool integrated with certified EMRs. It improves communication among health care providers by enabling practices to securely receive patient reports, such as discharge summaries, electronically from hospitals and other health care facilities directly into their EMRs. HRM's eNotifications feature delivers real-time ADT messages for your patients to allow clinicians to follow up with patients sooner after they're discharged.

Insights4Care (i4C) Dashboard and Advisory Service

Insights4Care (i4C) provides clinicians with insights about their patients at a population level, allowing them to think systemically and act locally. The i4C Dashboard is an EMR-integrated data visualization tool based on clinicians' own data in real time. The i4C Advisory Service provides advice to all users of certified EMRs, helping them go from "What?" to "So what?" to "Now what?" quickly and effectively. OMD staff are the keys to success in leveraging the i4C Program.

Ontario Laboratories Information System

Clinicians using an OMD-certified EMR can access the latest lab results for their patients or perform patient queries through Ontario Laboratories Information System (OLIS).

ONE ID

ONE® ID provides secure access to multiple digital health services using one username and password. OMD staff can sign you up to obtain your ONE ID credentials.

OntarioMD.ca

Register for OntarioMD.ca for access to the Privacy & Security Training Module and the Health Card Validation app. You can also complete an EMR Progress Assessment to learn how well you are using your EMR and where you may want to improve. The site is a convenient location to save your user agreements in eAgreements.
