80%

Ships carry more than 80% of global trade volume

1/4

Transportation accounts for about 1/4 of the global carbon emissions of various industries

IMO Objectives

Strategic objective: International shipping greenhouse gas emissions peak as soon as possible and, taking into account different national conditions, achieve net-zero emissions around 2050.

Short-term objective: By 2030, the annual greenhouse gas emissions from international shipping will be reduced by at least 20% compared with 2008, or by 30% with the most effort.

Objective for the use of alternative fuels: By 2030, the use of technologies, fuels and energy sources with zero or near zero greenhouse gas emissions shall account for at least 5%, or 10% at the most ideal condition.

- Equipment Management

Artificial Intelligence

- Intelligent Equipment
- Intelligent Dispatching

Green Energizing

- Integrated development of mixed energy
- Green energy services

Intelligent self-learning mechanical equipment

Mechanical equipment automatic operation

Dynamic and error-tolerant port dispatching

The system can develop solutions to problems with automatic real-time feedback

All-round monitoring combining digital and physic technology

Data integration and whole-process perception of port entities' data

打造新一代“智慧、绿色、韧性”港口典范

功能定位：

完善洋山深水港“水水中转”集疏运体系。
优化干支线配置结构、提升港口服务能级。

建设方案：

码头岸线**6.1km**，防波堤**7.5km**，陆域总面积**6.6km²**，用海总面积**23.6km²**（其中新增围填海**5.68km²**），共建设**7**个7万吨级和**15**个2万吨级集装箱泊位、配套建设工作船码头、防波堤、航道、锚地等必要设施，设计年通过能力**1160万TEU**。

整体立项、连续建设、逐段运营

西段：2025年投产，形成通过能力260万TEU。

西段-I：2022年开工，2025年投产。

建设4个2万吨级集装箱泊位、

工作船泊位、防波堤2.9km、陆域1.1km²。

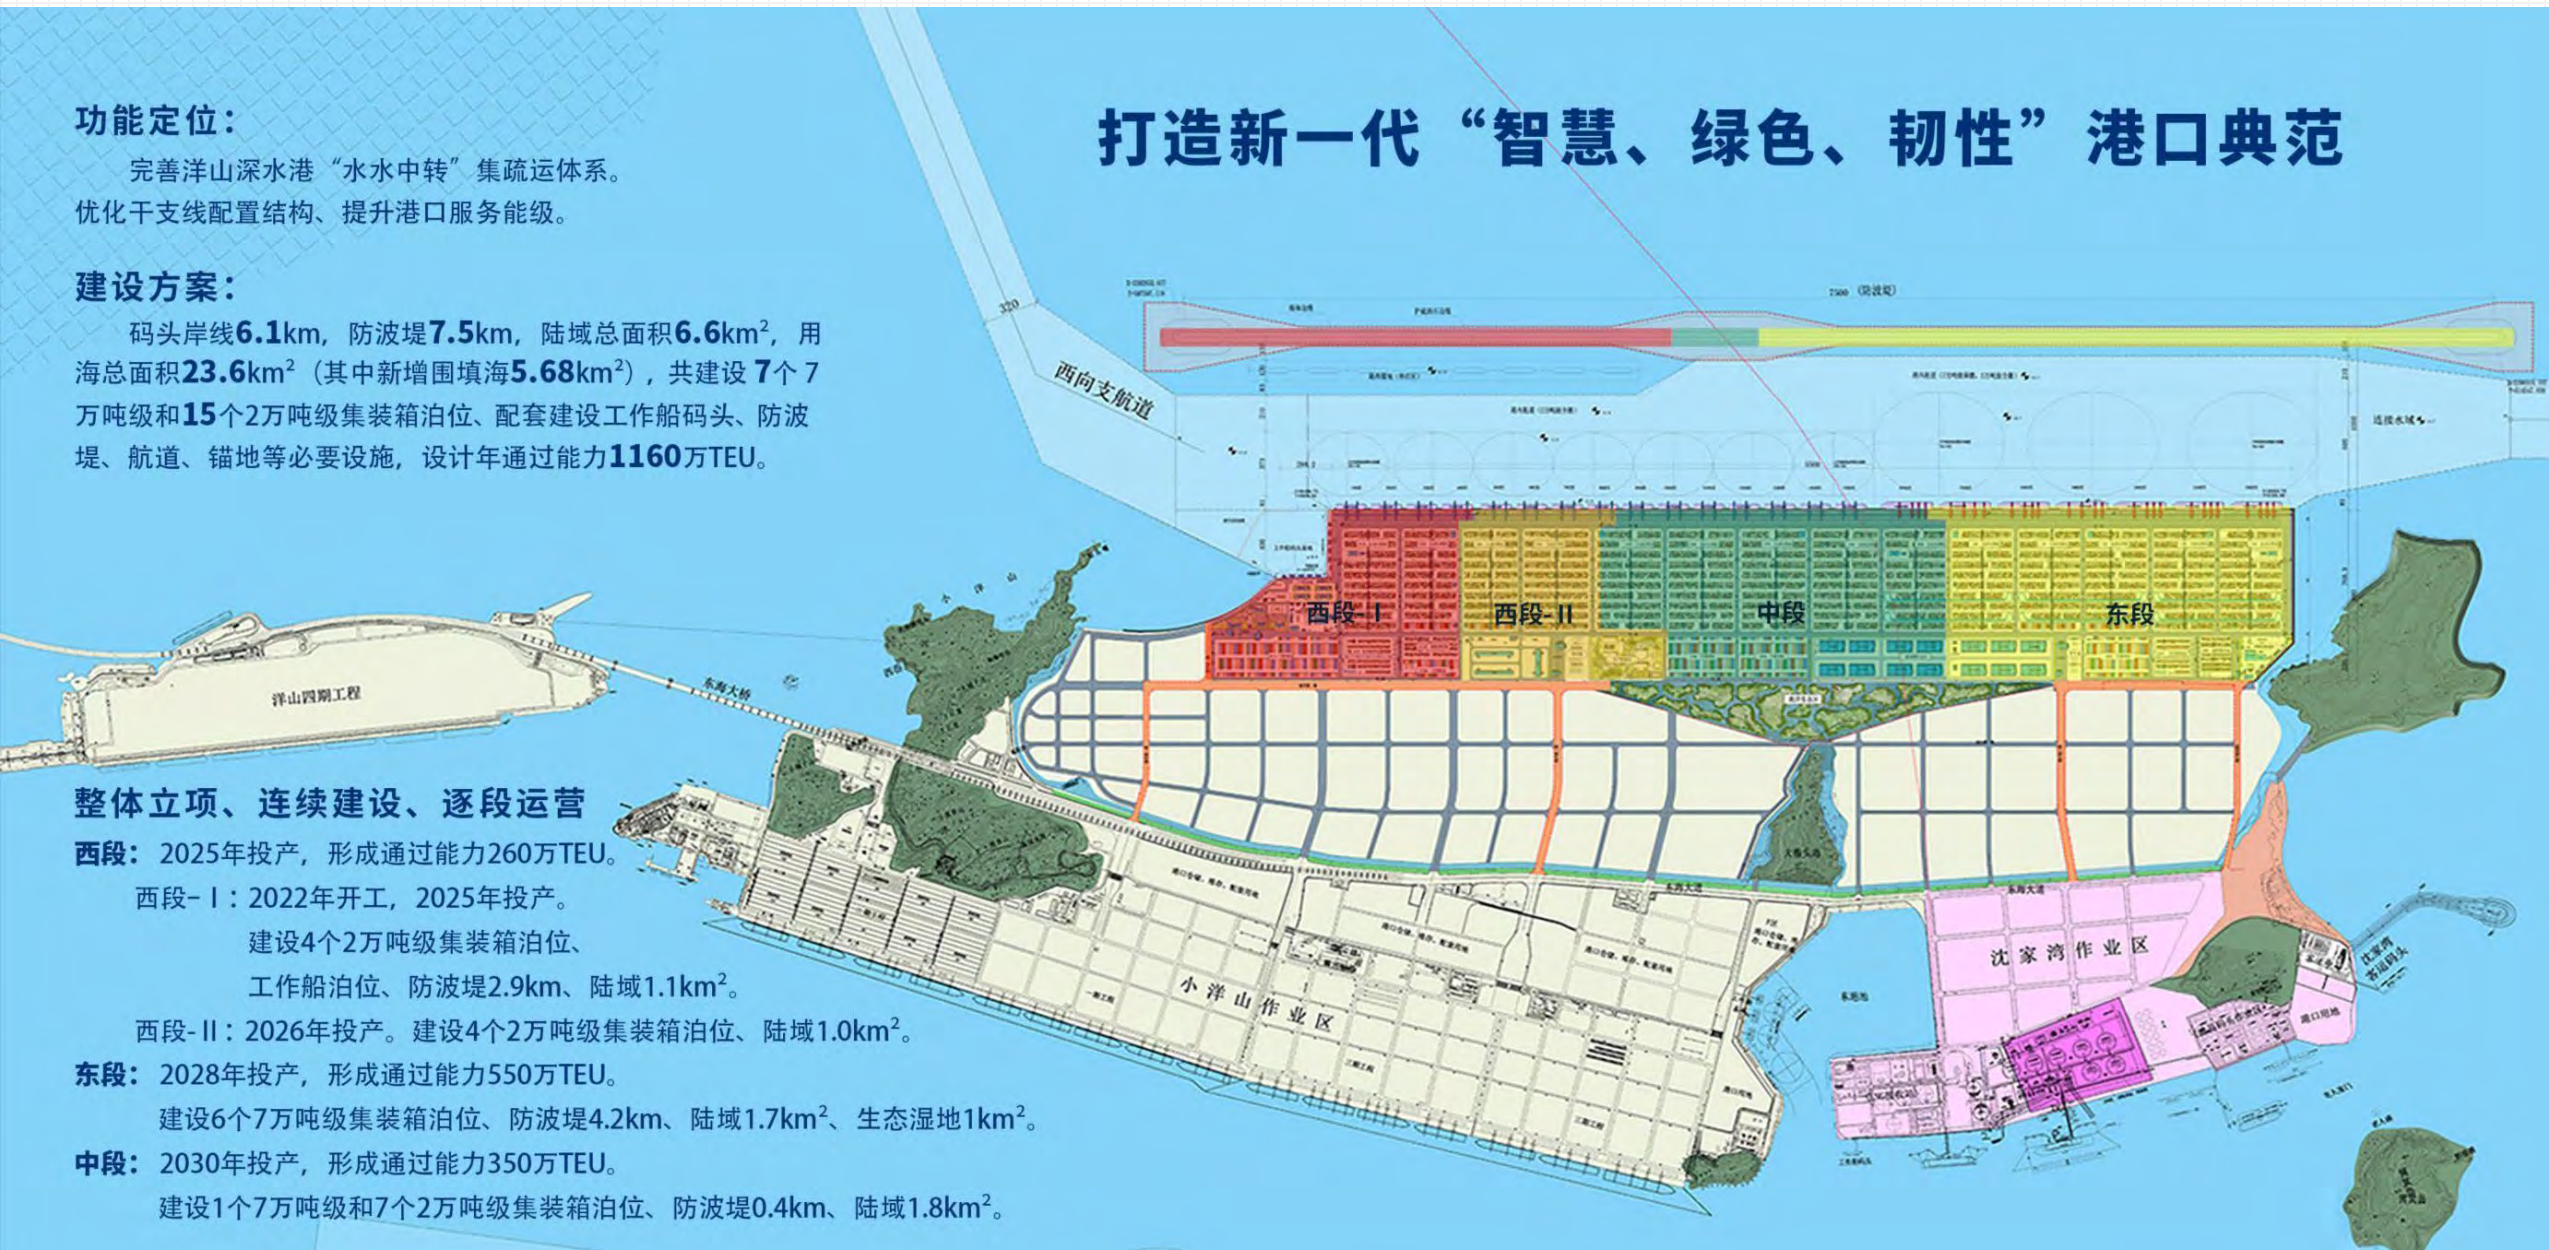

西段-II：2026年投产。建设4个2万吨级集装箱泊位、陆域1.0km²。

东段：2028年投产，形成通过能力550万TEU。

建设6个7万吨级集装箱泊位、防波堤4.2km、陆域1.7km²、生态湿地1km²。

中段：2030年投产，形成通过能力350万TEU。

建设1个7万吨级和7个2万吨级集装箱泊位、防波堤0.4km、陆域1.8km²。
