Traditional focus of Sanitation BC

Household data - Sanitation - World - Service Levels

- Focus primarily on Open
 Defecation -> Unimproved
 / Limited services
- Focus primarily on changing behaviours of individuals
- How can we adapt our approaches to sanitation BC to accelerator progress towards inclusive sanitation?

Developing sanitation behaviour change interventions

Source: COVID-19 Hygiene Hub

Facilities need to be present *and useable*

Need BC strategies that go beyond presence of facilities and focus on their use, maintenance, and upkeep

Source: SanDem project

Behaviours are important along the entire sanitation service chain

Understand – and respond to – economic and social barriers

TRENDS IN COVERAGE OF BASIC SANITATION AMONG THE RICHEST AND POOREST WEALTH

Behaviour change can be constrained by

- Lack of resources
- Lack of agency / power
- Lack of capacity

Understanding and responding to community needs

Understand and respond to the context-specific factors that influence targeted behaviours

Multiple guides and tools available, including:

- <u>COM-B (Behaviour Change Wheel)</u>
- Behaviour Centred Design
- <u>RANAS</u>

ACCELERATING INCLUSIVE SANITATION

Behaviour change is needed at <u>all</u> levels

Behaviour change as process, not an event

- Strategies need to adapt and learn in order to be successful
- Build in time for reflection, re-evaluation, and adaptation
- Plan for sustainability

ACCELERATING INCLUSIVE SANITATION

Thank you
