

Smart Solutions for Soil and Water Projects

Water sampling and monitoring, , sonic drilling, environmental research

About Us

Royal Eijkelkamp, since 1911, is an impressive global group of Dutch companies specialized in all aspects of soil and water research. Soil and water form an important part of global issues such as land degradation, food security, natural resources, land development, urbanization, and pollution. Royal Eijkelkamp comprises four different companies with one binding factor: the focus on soil and water.

Our Solutions

Each of the four companies has its own specialty but together they can do complete turn key projects. These companies are the following:

- Eijkelkamp Soil & Water offers solutions for soil and water projects. The product range varies from soil and water sampling equipment, laboratory equipment, (smart) sensors for measuring and monitoring, manure treatment technology, and field measurement equipment.
- Eijkelkamp Sonic Samp Drill is a producer of sonic drilling and sampling equipment. This special soil drilling technology is used in environmental drilling, mining and mineral exploration, geotechnical soil research, and special foundation drilling. Sonic drilling is very fast and clean.
- Eijkelkamp GeoPoint Soil Solutions focuses on developing and manufacturing SonicCPT tooling, smart sensing, accessories and SonicCPT related rigs, such as the recently developed Compact CPT Crawler and Drill'n CPT unit.
- Eijkelkamp Academy Royal Eijkelkamp's centre of expertise. Together with Dutch and international partners, we offer training, consultancy, and applied research.

The Eijkelkamp Foundation's more than 110 years of specialized knowledge and entrepreneurship is now benefiting the worldwide community. The latest and most ambitious project of the Eijkelkamp Foundation is The Water Entrepreneur in Benin.

Interactive Session

21 October, 4:30–5:00 p.m.
(GMT +8, Manila time)
