

BuntBrain EndUses

What is it?

BuntBrain EndUses is a **web-based software** that **facilitates the analysis of the end uses of water systems**, breaking down consumption into its essential components: washing machine, dishwasher, faucet, water tank, shower, outdoor uses, leaks, etc.

For whom?

BuntBrain EndUses is designed for **water utilities and authorities** that:

- ✓ Are looking for a tool to **increase awareness of water use** in their service areas
- ✓ Want to create a benchmark for water consumption efficiency in their service areas in order to **determine potential savings**
- ✓ Are looking for a tool to help them characterise and forecast demand
- ✓ Want to plan long-term measures to **prevent water stress**
- ✓ Want to **analyse the true effectiveness** of certain strategies and tools **for saving water**

Benefits

- 1 **Simplifies** the analysis of large volumes of data
- 2 **Shortens** the time required to analyse data
- 3 **Transparency**
- 4 **Accuracy**
- 5 **Anticipation**

Simple integration

A **copy of the meter reading data** is regularly and **securely** sent to the **BuntBrain** cloud, where the screening and analysis occurs. **BuntBrain simplifies pattern recognition in order to establish end uses for each installation.**

After processing the data, the utility can access the analysis results online.

BuntPlanet^o

BuntPlanet, an innovative **software engineering company**, provides **smart water solutions** based around **Artificial Intelligence (AI)** algorithms.

Its **BuntBrain** software has been awarded funding from the prestigious **EU Horizon 2020** fund (SME Instrument Programme) and the technology is being rolled out at water utilities in Germany, Spain and Latin America.

BuntPlanet wants to help utilities around the world to **reduce water losses** and improve their exploitation balance.
