SPEAKER PROFILE

Filippo Giustozzi

Professor
Royal Melbourne Institute of Technology (RMIT)

Professor Filippo Giustozzi is a pavement materials and road and airport design specialist with over 18 years' consultancy experience in Europe, the Middle East, South East Asia, and Australia. His consultancy portfolio covers the design and performance optimisation of transport infrastructure, development and implementation of recycling technologies for asphalt and construction waste, and the integration of sustainable solutions into large-scale highway and airport projects, as well as in local government projects. He has been engaged to deliver advanced design methods, material characterisation, performance-based specifications, life-cycle environmental impact assessments, and forensic investigations, providing technical guidance to contractors, material suppliers, and road and airport authorities on the optimization of mix designs, durability, and cost-effective infrastructure solutions. He regularly provides independent technical advice, performance testing oversight, and constructability support on infrastructure projects worldwide.
