

# Coffee and Agroforestry Livelihood Improvement Project Additional Financing

## PROJECT SNAPSHOT

Timor-Leste | Agriculture, Food, Nature, and Rural Development |  
Ministry of Agriculture, Livestock, Fisheries and Forestry  
Approved | 4,000 households

01

### Climate risk

Rising temperature, drought, and erratic rainfall threaten coffee flowering, yields, and quality. Climate-sensitive coffee supports 37.5% of Timor-Leste households, putting rural livelihoods at risk.

02

### Adaptation investment

Scale climate-resilient agroforestry for 4,000 households; diversify livelihoods for 350 women.

Improved shade, soil and water management reduce climate stress, while diversified incomes strengthen resilience.

03

### Resilience outcomes and transformational impact

By 2031, 70% of 4,000 supported households adopt climate-resilient practices and double production.

Lead-farmer demonstration plots sustain and scale adaptation through community-based extension.

04

### Investment case

This \$4.95 million additional financing grant scales climate-resilient coffee and agroforestry alongside women's economic empowerment, strengthening food security and rural livelihoods for 4,000 households while promoting wider adoption of proven practices.

**KEY TAKEAWAY:** Climate-resilient agroforestry protects rural livelihoods, empowers women, and puts adaptation in the hands of communities.
