

Project in Marshall Islands on Tech and Innovation, Training and Community Engagement Including Plant Connect Vision Platform for Remote Monitoring

About Osmoflo

Osmoflo is a global desalination and water treatment company located across Australia, the Middle East, and Asia. Osmoflo offers international coverage of its world class capabilities in delivering water treatment solutions. Our plants are located around the world at remote mine sites, oil & gas fields, power stations, city breweries, townships and coal seam gas fields—wherever there's a need for drinking, process, high purity or recycled water.

Our Solutions

Our Plant Connect Vision platform facilitates real-time CCTV providing motion detection, ensuring the security of a water facility

Our Osmoflo Control Centre provides 24/7 remote monitoring & support for plant operators facilitating continual process optimisation, reducing both the chemical and consumable costs.

For our successful project in the Marshall Islands, Osmoflo provided personal protective equipment (PPE) and training in safe work practices, risk assessment and risk management. We also trained Marshallese workers with skills and experience required for operating high technology equipment. Additionally, we held Master-class Workshops providing certified training in highly technical tasks, such as Pump alignment, HDPE welding, Pump Seal replacements, Analyser Calibrations and Chemical Awareness/Compatibility. We also hosted events in partnership with our Marshallese client and provided water expertise beyond the battery limits of the water plant. This included water distribution network, servicing & consulting for Marshallese organizations with community water systems, and rapid advice and working with community stakeholders on best practices to assist with managing a Typhoid outbreak.

Interactive Session

20 October, 1:00–1:30 p.m.
(GMT +8, Manila time)
