

Rio Tinto – “Building on a history of innovation and partnership to create the future of surface mining”

Davison, J

SYNOPSIS

Rio Tinto has a long history of innovation dating back to the late 1800s. As a company with a history spanning almost 150 years, innovation has been a key to maintaining its competitive position in the market. With the increased focus on ESG both within the community at large and within our business we are seeking to use innovation to materially reduce our impacts on the environment and to improve how we operate. Rio Tinto has released a strategy focussed upon –

- being the best operator;
- achieving impeccable ESG credentials;
- excelling in development; and
- strengthening our social licence.

These are underpinned by the values of care, courage and curiosity. We are using innovation to build a roadmap to deliver this strategy and this presentation will detail aspects of that roadmap as it relates to surface mining.
