Title: Let us introduce you to the world of Fabric Networking

Presenter: Alex Swan, Extreme Networks

The modern university network demands agility, scalablity and resilient connectivity, as well as inherent network security – what if you could achieve this without the complexity of traditional networking?

Join us over breakfast to see and learn about Fabric Connect. Based on enhanced Shortest Path Bridging/ IEEE 802.1 aq, Extreme Fabric represents a new way to design, build and operate networks. One that delivers simplicity and agility while at the same time improving security and stability.

Fabric Connect is addressing the needs of universities across Australia and New Zealand that are tired of dealing with legacy infrastructure and protocols. Fabric Connect allows the rapid deployment of new services to ensure students and facility can connected at all times. Hear about Extreme's approach using Fabric Connect to deal with new applications challenges such as AV.

Come along to learn how your needs can be addressed around campus or data center transformation, plug and play simplicity and programmability, automation and customization with Fabric Connect.
