

USC Moreton Bay – 1 year on, what’s working and lessons learned

USC Moreton Bay Foundation Building (completed in Feb 2020) is Australia’s newest University Campus sitting on a new greenfield development at "The Mill at Moreton Bay".

Implementing a new campus with over \$15m of new technology in conjunction with a rapid build time, was always going to be challenging. Delivering on the learnings from previous builds, we look at what methods USC undertook to not only deliver fully functioning rooms on day one, but also what techniques were used to make them easy to use.

Over a year later, we discuss how is it all going and have a walkthrough of one of the collaboration spaces. Are the systems still working the way they were designed? Also, what lessons have we learned moving forward?
