TITLE (20 words maximum)

Together we can transform IT operations – Elevating Service Delivery from a cost reduction initiative to meeting broader organisational strategies.

ABSTRACT CONTENT (300 words)

IT Lifecycle Management – on your terms

Procurement of end point IT (Compute, Network Infrastructure, A/V, and Print) is nothing new but effectively controlling the costs of deploying, supporting, and the environmental impact of disposing of these assets, can be difficult without a robust asset management system & the skilled resources to operate it.

CompNow have developed a set of comprehensive & flexible IT Lifecycle Services that provides Higher Education clients with an incremental approach to change, where greater value realisation is provided over time as more services are adopted – irrespective of the IT equipment manufactures involved.

Educational institutions can now select a service provider without the expense or need to contract multiple providers: IT equipment vendors, Financiers, Deployment and Tech support staff, and Green e-waste service providers. With our national Apple and Microsoft End Point Manager accreditations, end user compute can be deployed in minutes with devices ready for use without the need for IT support to spend up to an hour or more in the pre-configuration phase.

CompNow can provide end-to-end IT lifecycle services aimed at not only reducing your total e-waste but lowering the cost of delivering IT. Our solution delivers safe, secure, timely disposal of retired assets based upon true asset lifespan, not just contract end dates.

Remote learning enablement – master content distribution, assessment, and analysis

Messaging to existing and prospective Students can be extremely effective if that messaging is timely and relevant. Using Zutak from CompNow Universities can tailor specific content to students and deliver that content with specific factors such as location, language or dialect.

Remove the barriers of language and location from your organisation using Zutak - not your average CMS.
