

What is KidsResus?

The KidsResus Education and Training Program offers paediatric life support training to those involved in the initial resuscitation of an infant or child in respiratory or cardiac arrest. The program aims to improve the quality and effectiveness of resuscitation during a critical event.

The KidsResus programs are delivered in an interdisciplinary context across all health disciplines including doctors, nurses, paramedics, allied and community health professionals and university students. The KidsResus Coordinators will support you in training local instructors within your organisation.

Program structure

The program is delivered in 2 components:

1 E-Learning

Explores DRSABCD –with expansion of Exposure, Fluids and Glucose which is uniquely paediatric focused.

This is completed prior to attending the simulation, ensuring participants have the knowledge and skills required to successfully participate in the scenarios.

2 Simulation (60 minutes)

Human Factors and how these contribute to the outcome of a critical event is a focus of the discussion. Participants are encouraged to participate and reflect on their own experiences. The facilitated simulation scenarios allow the participants to combine the skills and knowledge gained from the e-Learning and respond to an unresponsive patient.

Simulation forms an integral part of safety, quality and education in health care

Our purpose is to champion safe, immersive experiential learning to ensure that children receive highest quality health care.

At Kids Simulation Australia we provide a wide range of courses to support health professionals to improve their knowledge and skills in caring for neonatal and paediatric patients. We also facilitate courses aimed at developing simulation faculty who go on to support insitu simulation and training within their units.

Current courses offered:

- Simulation Faculty Development: Simulation Essentials
- Simulation Faculty Development Workshop (3 Day Boston Children's Hospital & Starship Simulation Program)
- Managing Emergencies in Paediatric Anaesthesia (MEPA) for Consultants
- Paediatric BASIC
- Paediatric Neuro-critical Care: Beyond BASIC
- Paediatric Nursing: It's as easy as ABCd Part 1 & 2
- Perioperative Paediatrics (PoPPi) for Anaesthetic and Recovery Nurses
- Tiny Tots Trauma
- Advanced Neonatal Resuscitation Simulation Training
