What is Federally Required?

EVV is typically used for real-time verification of:

Date of service

Time service starts and ends

**Location of service using Caller-ID or GPS
Individual Providing Service**

Type of service and Individual receiving service

EVV AGGREGATOR

Automatically receive, reconcile, and mark status of EVV data from providers.

CLAIMS MANAGER

EDI capable management of claims, re-bills, reconciliation, and workflows.

LIVE AUTHORIZATION

Real time data management and reconciliation system for Medicaid, Medicare, and other service code based insurance authorizations

Can be used by provider and government agencies. Designed for tracking time and visit verification for services delivered remotely in homes or community settings

***APIs available for integration to MMIS, Data Lake or data warehouses**
