

# NDT REPORTING SYSTEMS

AGILENDT.com

We help service providers modernise and enhance their NDT reporting with custom web based solutions stored in the cloud.

## FEATURES

### TOTALLY BESPOKE

We build digital versions of your current report layouts then configure and build them into our platform.

### EASY ON-BOARDING

You don't need to configure anything, we create & configure everything from report design, custom workflows, user permissions and more.

### CLIENT PORTAL

Invite your customers to view, download and print their own reports.

### REPORT VALIDATION

Reports are embedded with validation QR code images to prevent fraud.

### REVISION HISTORY

All edits made during the report lifecycle are recorded and reports can be restored back to a specific point in time.

### UNLIMITED CUSTOMISATIONS

You get a unique product and our developers are on-hand to work on extra features, reworking existing flows and adding modules.

### USER PERMISSIONS

Multiple customer defined user types with different abilities that can be managed within the tool.

### MULTIPLE LANGUAGES

Easily switch between multiple languages in the user account settings page.

## BENEFITS

### IMPROVE QUALITY

By centralising and standardising your reporting processes you can better control report output and manage quality.

### INCREASE SALES

Giving your customers access can create a stronger link and makes the process of ordering new work easier.

### FASTER REPORTING

Streamline your reporting flows with email integrations, report cloning, version history, automatic numbering and much more...

### NEVER LOSE REPORTS

All inspection data is stored in a backed up database in the cloud. Giving your customer access also prevents them losing reports.

# TAKE BACK CONTROL OF YOUR NDT REPORTING

Improve quality management with our integrated dashboard where you get an instant overview of reporting activity across your business; key attribute filter, highlighted rejectable reports, ability to approve / disapprove reports and deliver with ease. A full text search bar allows searching for reports, clients & users.

# **BOLT ONS**

## **NDT WORK REQUEST**

Our work request system product allows you to quickly create an official request document that can then be assigned to one or a number of different inspection technicians. This can be either printed out into a hard copy so the technician can take it with them to the inspection site or remain in digital format and can be viewed on any digital device such as a tablet or cell phone. The request document is then used as an aide in creating the NDT report.

## **D.R.O.P.S. REPORTING**

Within the Oil & Gas industry the Dropped Object Prevention Scheme is an industry-wide initiative focused on preventing dropped objects, with the ultimate goal of delivering a second nature dropped objects prevention strategy across the industry. We've built a cloud based solution which helps operators create and deliver DROPS survey reports.

## **TIME TRACKING, INVOICING & BILLING**

Track billable hours and consumables. We've created an NDT specific billing management system that allows service providers to seamlessly manage all billing processes that can be linked to reports or projects. This includes automated invoicing, invoice exports, customer specific hourly rates, equipment hire rates, consumables.

## **PROCEDURE MANAGEMENT**

Maintaining all your procedures can be difficult as each one must be regularly updated and it's essential to make all team members aware of any updates. This can become a nightmare when dealing with paper documents and traditional procedure systems. Our procedure management system gives you more control over your company's vital procedures and makes it easy to manage updates and customer / inspection authority reviews.

## **INCIDENT TRACKING**

Track all incidents with our incident tracking systems. Easily record all injuries, near misses and incidents to make your work place safer. Maintain accurate records to prove that your company takes a pro-active approach to health and safety. Via an intuitive web based interface your technicians can easily create descriptive media rich incident reports that can be approved and then assigned to the relevant personnel within your organisation for corrective actions.

"This product is built by NDT professionals who know and understand how ineffective and inefficient reporting systems can erode the bottom line. By providing a cloud based application tool which is easily accessible and simple to use, service providers can benefit from their investment in Agile NDT by streamlining their business processes."

**Irvine Gilbert**  
Manager at Specialist NDT

"We're really happy with our reporting system. Each method was customised by the team at Agile NDT to suit our specific reporting requirements. Within 2 weeks of initial payment we had our first method up and running. Our whole business revolves around our reporting system so it has to be reliable. We can access it from any location without expensive IT equipment."

**Alf Riveland**  
Manager at QNDT

"The Agile NDT system is by far the best reporting system that I have used. I am comforted by the fact that my reports are safely stored on a secured server and that I am able to access them easily. I like the fact that I am able to view and compile reports on my mobile, and the report colour scheme for the different NDT methods are quite handy too."
