

GABI's mission is to advance awareness, understanding and proficiency in international energy policy issues, with a focus on the global scale. GABI maintains a broad spectrum of program activities to support its mission including, but not limited to, organizing seminars, workshops, and roundtable discussions, as well as producing research papers, reports and policy insights.

GABI approaches energy from a diversity viewpoints—economics, sustainability, security of supply, diversity, research and development, safety, and geopolitics. GABI also offers professional leadership programs through which participants develop greater familiarity with policymaking process while engage in discussions with experts and key stakeholders.

Headquartered in Washington, DC with partners around the world, we at GABI use our broad networks that include governments, industry leaders, think tanks, academia, NGOs, and research institutes to work extensively with issues related to zero-carbon energy technologies including nuclear, hydrogen, and renewables. We also work to understand the international relationships that undergird the deployments of such technologies.
