

Asst. Prof. Savvas Genitsaris studied biology at Aristotle University of Thessaloniki (AUTH), and acquired his Master's degree in Ecology, Evolution and Conservation from Imperial College, London. He completed his Ph.D. in Microbial Ecology at AUTH and then worked on various projects related to microbial and molecular ecology as a post-doc researcher. He is an Assistant Professor at the School of Biology, National and Kapodistrian University of Athens, Greece, since 2021. His research interests are related to the investigation of the diversity, structure, and function of microbial communities in various ecosystems with an emphasis on aquatic systems. He is interested on the interactions of microbes with each other, with the abiotic environment and with other organisms of aquatic systems. He combines classical microscopy tools and modern -omics analyses to characterize microbial communities and their functions.
